Environmental Education in the 21st Century Joy Palmer, 2002-09-11
Environmental education is a field characterised by a paradox Few would doubt the urgency and importance of learning to live in sustainable ways but environmental education holds nowhere near the priority position in formal schooling around the world that this would suggest This text sets out to find out why this is so It is divided into six parts Part 1 is a concise history of the development of environmental education from an international perspective Part 2 is an overview of the global agenda or subject knowledge of environmental education Part 3 introduces perspectives on theory and research in environmental education Part 4 moves on to practice and presents an integrated model for planning environmental education programmes Part 5 brings together invited contributors who talk about environmental education in their own countries from 15 countries including China South Africa Sri Lanka and the USA Part 6 returns to the core questions of how progress can be made and how we can maximise the potential of environmental education for the twenty first century

Developing Place-responsive Pedagogy in Outdoor Environmental Education Alistair Stewart, 2020-02-25
This book is a rhizomatic curriculum autobiography that charts the author s efforts to develop and promote Australian outdoor environmental education practices that are inclusive of and responsive to the places in which they are performed Joining philosophical concepts created by Gilles Deleuze and Felix Guattari with William Pinar s autobiographical method for curriculum inquiry the author re considers the interrelated concepts contexts and complex conversations with colleagues students and others

that have shaped his approach to curriculum pedagogy and research for fifteen years or more Emphasising the complexity of developing curricula and pedagogies that engage in a respectful and generative way with the natural and cultural history of the Australian continent the author explicates and enacts his attempts to think differently about the cultural curricular and pedagogical understandings that inform the practices of Australian outdoor environmental educators Outdoor environmental education in Australia has historically been influenced by imported universalist ideas particularly from the USA and the UK However during the last two decades a growing number of researchers in this field have challenged the applicability of such taken for granted approaches and advocated the development of curricula and pedagogies informed by the unique bio geographical and cultural histories of the locations in which educational experiences take place As this book demonstrates Alistair Stewart is prominent among the vanguard of Australian outdoor environmental educators who have led such advocacy by combining practical experience with theoretical rigour *New England Journal of Education* Thomas Williams Bicknell, Albert Edward Winship, Anson Wood Belding, 1901 **New Materialisms and Environmental Education** David A. Environmental Education to Sustainability Education: Effective and Inclusive Strategies For Teaching to All Elementary Students Amy M. Loskota, 2004 [Engaging Environmental Education](#), 2010-01-01 As more attention is devoted to the increasing and complex socio ecological issues facing the planet new insights and new ways of thinking are being sought about the learning and agency of children and adults in relation to these environmental concerns The contributors to this book address the critically important dual challenge of making environmental education engaging while engaging individuals institutions and communities Rather than treating students and citizens as passive recipients of other people s knowledge the book highlights the importance of engaging learners as active agents in thinking about and constructing a more sustainable and equitable quality of life The case studies emphasize socio cultural approaches to

environmental learning within and outside formal education in a diverse range of international contexts including Canada Denmark Korea the Netherlands South Africa Sweden the United Kingdom and the United States The authors not only illuminate the challenges and complexity of engaging youth and adults in meaningful learning as well as informed action on complex environmental issues but also document and offer important insights into promising ways in which these challenges might be addressed In addition to the many stimulating ideas and strategies for building the learning capacities of individuals and organizations for creating ecologically sustainable communities and societies further important questions are raised that educators policymakers and researchers might consider *Post-Sustainability and Environmental Education* Bob

Jickling, Stephen Sterling, 2017-03-17 This book provides a critique of over two decades of sustained effort to infuse educational systems with education for sustainable development Taking to heart the idea that deconstruction is a prelude to reconstruction this critique leads to discussions about how education can be remade and respond to the educational imperatives of our time particularly as they relate to ecological crises and human nature relationships It will be of great interest to students and researchers of sociology education philosophy and environmental issues Environmental

Education and Advocacy Edward A. Johnson, Michael J. Mappin, 2005-03-03 Environmental education has often blurred the distinction between ecological science and environmental advocacy Growing public awareness of environmental problems and desire for action may be contributing to this blurring There is a need to clarify the distinction between the role of ecological science and the role of social and political values for the environment within environmental education This book addresses this need by examining the changing perspectives of ecology in education and the changing perspectives of education in environmental education Guidelines are provided for assessing the science and education perspectives within environmental education along with suggested frameworks for development of programs and resources that integrate current science education and action This book will be of interest to environmental educators ecologists interested in environmental education and curriculum and resource developers **Outdoor, Experiential, and Environmental**

Education Carol Adkins, 2002 **Environmental Education in a Climate of Reform** Sylvia Christine Almeida, 2015-10-29 India is grappling with serious environmental issues that have been largely sparked by its galloping economy As a measure of its seriousness to reduce the environmental impacts it has spearheaded numerous policy initiatives One of the major thrusts of the proposed initiatives to curb environmental degradation has been to create an informed and well educated citizenry The federal mandates have triggered new curriculum policies and the compulsory teaching of environmental and sustainability education at all levels in all education institutions This volume examines the policy practice conundrum It looks at how national and international policy reforms reach practitioners in this case teacher educators Furthermore it unravels how teacher educators understand environmental education the ways in which they negotiate its demands on their busy schedules what helps them in determining relevant issues within this and finally how they implement these policies in their everyday

practices It is evident from this book that while there have been some really well meaning development of policies their impact on teacher educators practice and therefore student teachers learning about Environmental Education is limited The study showed that while these teacher educators had a clear understanding of the environment and saw the need importance of incorporating Environmental Education in their daily practices they had very little scope to do so There were numerous factors that constrained implementation The book provides inputs on global policy practice gaps It offers valuable insights to a global audience grappling with understanding the ways in which environmental education policies are put into practice in emerging economies like India The final argument is thesis that while policy reforms are a step in the right direction they need to be backed up with strong implementation systems in order to be successful div The SAGE Handbook of Philosophy of Education Richard Bailey,Robin Barrow,David Carr,Christine McCarthy,2010-03-23 This book provides an authoritative yet accessible guide to the Philosophy of Education its scope its key thinkers and movements and its potential contribution to a range of educational concerns The text offers a balanced view of three key dimensions first in giving an equal weight to different styles and modes of philosophy second by including past and present perspectives on philosophy of education and third in covering both the general perennial issues in philosophy and issues of more contemporary concern Section one of the book exemplifies different styles of philosophy paying attention to the contemporary debates as to the nature possibilities and limitations of these different approaches to philosophy of education Section two is devoted to particular thinkers of the past and more general coverage of the history of philosophy of education Section three is dedicated to contemporary philosophic thought on education providing the basis and reference point for an exploration of contemporary issues The handbook is designed primarily to be useful to students studying the field of philosophy of education in the context of the study of educational foundations or theory But it is also designed to be of use to practising teachers who wish to gain easy access to current philosophical thinking on particular contemporary educational issues and to educationalists of all types who want a succinct guide to questions relating to the nature the history and the current state of the art of philosophy of education **Ecologizing Education** Sean Blenkinsop,Estella C. Kuchta,2024-04-15 Ecologizing Education explores how we can reenvision education to meet the demands of an unjust and rapidly changing world Going beyond green schooling programs that aim only to shape behavior Sean Blenkinsop and Estella Kuchta advance a pedagogical approach that seeks to instills eco conscious and socially just change at the cultural level Ecologizing education as this approach is called involves identifying and working to overcome anti ecological features of contemporary education This approach called ecologizing education aims to develop a classroom culture in sync with the more than human world where diversity and interdependency are intrinsic Blenkinsop and Kuchta illustrate this educational paradigm shift through the real world stories of two public elementary schools located in British Columbia They show that this approach to learning starts with recognizing the environmental and social injustices that pervade our industrialized societies By documenting how

ecologizing education helps children create new relationships with the natural world and move toward mutual healing

Blenkinsop and Kuchta offer a roadmap for what may be the most potent chance we have at meaningful change in the face of myriad climate crises Timely practical and ultimately inspirational Ecologizing Education is vital reading for any parent caregiver environmentalist or educator looking for wholistic education that places nature and the environment front and center
