renowned geographer Richard Campanella recounts the epic challenges and ingenious efforts to dewater the Crescent City. With forays into geography, public health, engineering, architecture, politics, sociology, race relations, and disaster response, he chronicles the herculean attempts to reclaim the city's swamps and marshes and install subsurface drainage for massive urban expansion. The study begins with a vivid description of a festive event on Mardi Gras weekend 1915 which attracted an entourage of elite New Orleanians to the edge of Bayou Barataria to witness the christening of giant water pumps. President Woodrow Wilson, connected via phoneline from the White House, planned to activate the station with the push of a button, effectively draining the West Bank of New Orleans. What transpired in the years and decades that followed can only be understood by examining the large swath of history dating back two centuries earlier to the geological formation and indigenous occupation of this delta and extending through the colonial, antebellum, postbellum, and Progressive eras to modern times. The consequences of dewatering New Orleans proved both triumphant and tragic. The city's engineering prowess transformed it into a world leader in drainage technology, yet the municipality also fell victim to its own success. Rather than a story about mud and machinery, this is a history of people, power, and the making of place. Campanella emphasizes the role of determined and sometimes unsavory individuals who spearheaded projects to separate water from dirt, creating lucrative opportunities in the process, not only for the community but also for themselves.

Lees' Loss Prevention in the Process Industries Frank Lees, 2005-01-10. Over the last three decades, the process industries have grown very rapidly, with corresponding increases in the quantities of hazardous materials in process, storage, or transport. Plants have become larger and are often situated in or close to densely populated areas. Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough, Bhopal, Chernobyl, Three Mile Island, the Phillips 66 incident, and Piper Alpha, to name a few. The field of Loss Prevention is and continues to be of supreme importance to countless companies, municipalities, and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas, thus increasing the hazard of loss of life or property. This book is a detailed guidebook to defending against these and many other hazards. It could, without exaggeration, be referred to as the bible for the process industries. This is THE standard reference work for chemical and process engineering safety professionals. For years, it has been the most complete collection of information on the theory, practice, design, elements, equipment, regulations, and laws covering the field of process safety. An entire library of alternative books and cross-referencing systems would be needed to replace or improve upon it, but everything of importance to safety professionals, engineers, and managers can be found in this all-encompassing reference. Instead, Frank Lees' world-renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world's chief experts in this field.

Sam Mannan is professor of chemical engineering at Texas A principles practice codes standards data and references needed by those practicing in the field

Understanding, Measuring, and Improving Daily Management Ross Kenneth Kennedy, 2019-01-15 Understanding Measuring and Improving Daily Management explains the critical parts of a continuous improvement strategy to achieve Operational Excellence and where reactive improvement through effective daily management fits in. In addition, it shows the consequences to your Operational Excellence journey if daily management is not performed well. Reactive improvement develops the capability and discipline within the organization to be able to rapidly recover from an event or incident that stops you from achieving your expected or target performance for the day shift or hour and most importantly your ability to capture the learning and initiate corrective actions so that the event or incident will not re-occur anywhere across the organization. As such, reactive improvement focuses on improving daily management through your daily review meetings, your information centers supporting the daily review meetings, and your frontline problem solving root cause analysis capability at all levels. The book introduces the seven elements of reactive improvement that must work in concert for effective daily management and allows the reader to rate their site or department to determine their starting point compared to best practices.

- 1 Supportive organization structure to support development of your people so they have ownership and accountability for the performance of their area of responsibility
- 2 Effective frontline leaders to ensure everyone else in the leadership structure are not working down a level
- 3 Appropriate measures with expected targets that are linked to the site's Key Success Factors for Operations to ensure goal alignment and are relevant to the area being focused on
- 4 Structured daily review meetings to identify opportunities, problems, incidents, and monitor progress of their solution so they don't happen again
- 5 Visual information centers that visually display daily and trending performance along with monitoring of actions to address problems/issues raised
- 6 Frontline problem solving root cause analysis capability across the site
- 7 Rapid sharing of learning capability across shifts, departments, and the organization

The author outlines in detail why each of the seven elements are important to achieving Operational Excellence and most importantly how to implement each element, supported with many templates and tools.
