

WALKTHROUGH

AIRLINER TRAINING FLIGHTS

HELPING YOU GET STARTED WITH THE AIRLINER

Now included with the default simulator is an all-new airliner training module to help you get to grips with an airliner aircraft. In the two tutorial missions, you will learn how to take off an Airbus A320neo and also how to land the aircraft.

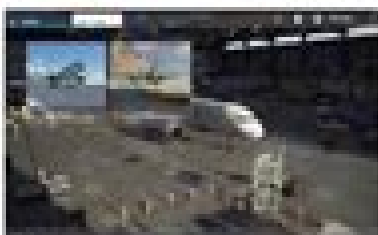

The pair of missions take place at Nice Côte d'Azur Airport (NCE) and will take you around 20 minutes to complete.

Both missions can be completed using any controller and will also teach some key phrases and words that are common across primer aircraft. There are also some tips and tricks for you to learn about Airbus-specific phraseology.

Accessing the Missions

To get access to these new Airliner Training packs, you will need to head to the training section from the main menu. From there, select 'Airliner Training' and you will see two options:

1. A320 Take-Off
2. A320 Landing

1 - A320 TAKE-OFF

Training Session Duration: 07 Minutes

Key Learnings:

- Read take-off speeds on the MCDU
- Identify the different detents on the thrust levers
- Monitor the Primary Flight Display to identify speeds
- Define pitch attitude using the Flight Director during initial climb

Overview:

Airliners are more complex to learn, but the fundamentals are the same. This course will teach you how to get in the air with a few steps.

Introduction

Welcome to your first lesson in the Airbus A320neo. Your goal with this mission is to get airborne safely.

Upon loading the mission, your instructor will give you a brief introduction to flyby wire and what is required of you to take off.

One element your instructor mentions is the use of addthrust. Once you have set the placement of the throttle detent (more on that in a second), your aircraft will maintain the speed selected by the autopilot. This will help you to focus on flying whilst keeping your aircraft at a safe speed.

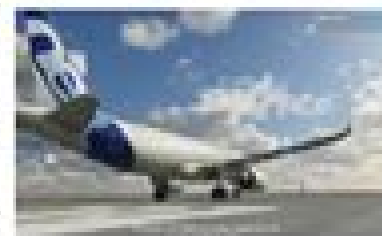

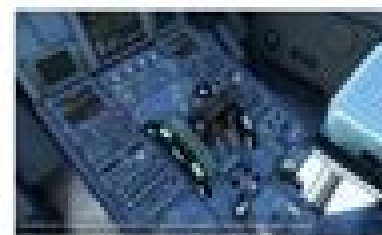

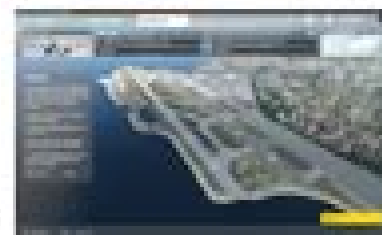

Verifying Speeds

Your first job is to verify the take-off speeds for this aircraft. This aircraft is bigger, heavier and needs more power to get into the air. Press CTB(-) to shift your viewport to the Multi-Function Control and Display Unit (MCDU) and you will see the various speeds you should note.
