Fraenkel, 2016-10-21 Abraham A Fraenkel was a world renowned mathematician in pre Second World War Germany whose work on set theory was fundamental to the development of modern mathematics A friend of Albert Einstein he knew many of the era s acclaimed mathematicians personally He moved to Israel then Palestine under the British Mandate in the early 1930s In his autobiography Fraenkel describes his early years growing up as an Orthodox Jew in Germany and his development as a mathematician at the beginning of the twentieth century This memoir originally written in German in the 1960s has now been translated into English with an additional chapter covering the period from 1933 until his death in 1965 written by the editor Jiska Cohen Mansfield Fraenkel describes the world of mathematics in Germany in the first half of the twentieth century its origins and development the systems influencing it and its demise He also paints a unique picture of the complex struggles within the world of Orthodox Jewry in Germany In his personal life Fraenkel merged these two worlds during periods of turmoil including the two world wars and the establishment of the state of Israel Including a new foreword by Menachem Magidor Foreword to the 1967 German edition by Yehoshua Bar Hillel Externalism Mark Rowlands, 2014-12-18 It is commonly held that our thoughts beliefs desires and feelings the mental phenomena that we instantiate are constituted by states and processes that occur inside our head The view known as externalism however denies that mental phenomena are internal in this sense The mind is not purely in the head Mental phenomena are hybrid entities that straddle both internal state and processes and things occurring in the outside world The development of externalist conceptions of the mind is one of the most controversial and arguably one of

the most important developments in the philosophy of mind in the second half of the twentieth century Yet despite its significance most recent work on externalism has been highly technical clouding its basic ideas and principles Moreover very little work has been done to locate externalism within philosophical developments in both analytic and continental traditions In this book Mark Rowlands aims to remedy both these problems and present for the reader a clear and accessible introduction to the subject grounded in wider developments in the history of philosophy Rowlands shows that externalism has significant and respectable historical roots that make it much more important than a specific eruption that occurred in late twentieth century analytic philosophy

**Imagined Causes: Hume's Conception of Objects** Stefanie Rocknak, 2012-09-14

This book provides the first comprehensive account of Hume's conception of objects in Book I of *A Treatise of Human Nature* What according to Hume are objects Ideas Impressions Mind independent objects All three None of the above Through a close textual analysis Rocknak shows that Hume thought that objects are imagined ideas But she argues he struggled with two accounts of how and when we imagine such ideas On the one hand Hume believed that we always and universally imagine that objects are the causes of our perceptions On the other hand he thought that we only imagine such causes when we reach a philosophical level of thought This tension manifests itself in Hume's account of personal identity a tension that Rocknak argues Hume acknowledges in the Appendix to the Treatise As a result of Rocknak's detailed account of Hume's conception of objects we are forced to accommodate new interpretations of at least Hume's notions of belief personal identity justification and causality
