It traces the growing aerial threat from its inception in WWI and the response of each of the major navies down to the end of WWII, highlighting in particular the underestimated danger from dive bombing. The work considers what effective AA fire control required and how well each navy's systems actually worked, analyzing the weapons, how they were placed on ships and how this reflected the tactical concepts of naval AA defense. All important guns, directors and electronics are represented in close up photos and drawings and lengthy appendices detail their technical data. It is simply another superb contribution to naval technical history by its leading exponent.
