Cohen,2013-06-29 Natural Sciences and the Social Sciences contains a series

of explorations of the different ways in which the social sciences have interacted with the natural sciences. Usually such interactions are considered to go only one way from the natural to the social sciences. But there are several important essays in this volume which show how developments in the social sciences have affected the natural sciences even the hard science of physics. Other essays deal with various types of interaction since the Scientific Revolution. In his general introductory chapter Cohen sets some general themes concerning analogies and homologies and the use of metaphors drawing specific examples from the use of concepts of physics by marginalist economists and of developments in the life sciences by organismic sociologists. The remaining chapters which explore the different ways in which the social sciences and the natural sciences have actually interacted are written by leaders in the field of history of science drawn from a wide range of countries and disciplines. The book will be of great interest to all historians of science, philosophers interested in questions of methodology, economists and sociologists and all social scientists concerned with the history of their subject and its foundations.

Managing Natural Science Collections Robert Huxley, Christiane Quaisser, Carol R Butler, René WRJ Dekker, 2020-07-15. *Managing Natural Science Collections* demonstrates the need for consistency and evidence based decision making in the management of natural science collections which are becoming increasingly valuable when it comes to addressing societal challenges. Drawing upon the experience of four experts who have managed some of the largest and most diverse collections in the world, the book aims to assist in the making of strategic and operational decisions regarding care, development, access and resource management. Encouraging the reader to consider how collection strategies can be aligned with the mission of their institution and contribute to its vision, the authors also examine ways to deliver a consistent approach that will secure the present and future availability and relevance of collections. Principles of good practice and resource optimisation in an ethical and legal context are provided throughout the book as well as case studies, sample documents and templates all of which will be useful for discussion and teaching. *Managing Natural Science Collections* encourages each reader to consider the different options available to them. As such it should be essential reading for museum practitioners and other professionals around the world who are involved with any strategic aspect of managing natural science collections. Students of museum studies will also find much to interest them within the pages of this book.
