Population - the entire group of individuals being studied

Sample - a subset of the population

Systematic Sampling - selecting every kth member of the population

Stratified Sampling - dividing the population into strata and sampling from each

Cluster Sampling - dividing the population into clusters and sampling from one or more clusters

Sampling

Simple Random Sampling - every member of the population has an equal chance of being selected

Systematic Sampling - selecting every kth member of the population

Stratified Sampling - dividing the population into strata and sampling from each

Cluster Sampling - dividing the population into clusters and sampling from one or more clusters

Convenience Sampling - selecting members of the population who are easily accessible

Voluntary Response Sampling - selecting members of the population who volunteer to participate

Non-response Bias - bias that occurs when members of the population do not respond to the survey

Coverage Bias - bias that occurs when some members of the population are not included in the sample

Sampling Error - the difference between the sample mean and the population mean

Margin of Error - the range of values within which the sample mean is expected to fall

Confidence Interval - the range of values within which the population mean is expected to fall

Measures of Central Tendency

Mean - the average of all the values

Median - the middle value of the data

Mode - the most frequent value

Range - the difference between the highest and lowest values

Interquartile Range - the range between the first and third quartiles

Standard Deviation - a measure of the spread of the data

Variance - the average of the squared differences from the mean

Coefficient of Variation - a measure of the relative variability of the data

Measures of Dispersion

Range - the difference between the highest and lowest values

Interquartile Range - the range between the first and third quartiles

Standard Deviation - a measure of the spread of the data

Variance - the average of the squared differences from the mean

Coefficient of Variation - a measure of the relative variability of the data

Skewness - a measure of the asymmetry of the distribution

Kurtosis - a measure of the "tailedness" of the distribution

Systematic Sampling

Advantages - easy to implement, ensures every member of the population has a chance of being selected

Disadvantages - may introduce bias if there is a pattern in the data

Formula - $\text{Step} = \frac{\text{Population Size}}{\text{Sample Size}}$

Example - A population of 1000 is divided into 10 groups of 100. A random starting point is chosen, and every 10th member is selected.

Stratified Sampling

Advantages - ensures that all subgroups of the population are represented

Disadvantages - more complex than simple random sampling

Formula - $\text{Sample Size for Stratum} = \frac{\text{Stratum Size}}{\text{Population Size}} \times \text{Total Sample Size}$

Example - A population of 1000 is divided into 4 strata based on age. A sample of 100 is taken, with 25 from each stratum.

Cluster Sampling

Advantages - easy to implement, especially for large populations

Disadvantages - may introduce bias if clusters are not representative

Formula - $\text{Sample Size for Cluster} = \frac{\text{Cluster Size}}{\text{Number of Clusters}} \times \text{Total Sample Size}$

Example - A population of 1000 is divided into 10 clusters of 100. A random starting point is chosen, and every 10th member is selected.

Convenience Sampling

Advantages - easy to implement, low cost

Disadvantages - high risk of bias, not representative

Formula - $\text{Sample Size} = \frac{\text{Population Size}}{\text{Number of Convenience Samples}}$

Example - A population of 1000 is divided into 10 groups. A random starting point is chosen, and every 10th member is selected.

Voluntary Response Sampling

Advantages - easy to implement, low cost

Disadvantages - high risk of bias, not representative

Formula - $\text{Sample Size} = \frac{\text{Population Size}}{\text{Number of Voluntary Responses}}$

Example - A population of 1000 is divided into 10 groups. A random starting point is chosen, and every 10th member is selected.
