2947 Communications Service Monitor

The 2947 communications service monitor was built to meet the requirements of the US Navy and Federal Aviation Administration. It is the lightest, most rugged service monitor available with a full performance spectrum analyzer. The 2947 provides an excellent combination of instruments for all types of maintenance work, while providing exacting measurements for use in repair and calibration laboratories.

Field Operation

At under 26 lbs (12 kg) the 2947 TestMate lightens the load to remote sites. The form factor of the 2947 combined with the bail arm make it easy to carry and positioning for optimal usage. A front cover over the front panel for storage of adapters and further protection to the instrument's front panel.

Fast Full Performance Spectrum Analyzer

The spectrum analyzer provides spans from 100 Hz per division to full span and also has a fully adjustable reference level. Speed is comparable with analog analyzers, allowing real time adjustments over a full 50 dB dynamic range. With the tracking generator provided as standard, duplexers and filters can be aligned quickly and easily.

Live Look and Listen

This feature puts the 2947 TestMate above all of its peers with the ability to examine signals on the screen and demodulate them simultaneously. Intermittent interference can be isolated quickly and the signals then easily identified.

From 2 μ V to 150 Watts

The 2947 will measure the power of low level signals such as those off-air or those found when probing a circuit. 150 Watts measurement is provided without the need for external attenuators.

Accurate RF Signals

The signal generator provides coverage from 400 kHz to 1.05 GHz with +5 dBm output (+7 dBm overrange) and fast switching speed. Level accuracy is ± 2 dB at all levels above -127 dBm.

Duplex

Full duplex operation is provided by the 2947. This allows testing of duplex radios as well as simultaneous testing of repeater transmit and receive paths. There are no restrictions to the duplex offset.

Cellular and Trunking - built in

AMPS and TACS analog cellular standards testing.

SSB Demodulation

The SSB demodulator allows signals to be demodulated either via the internal loudspeaker or via the accessory socket. (upper and lower sideband in the 400 kHz to 1 GHz range).

Network Simulation

The 2947 simulates the signaling protocol that the radio would see from the real network. This allows calls to be set up and handled enabling receiver and
