Revisiting the Equity Risk Premium Laurence B. Siegel , Paul McCaffrey ,2023-06-06 In 2001 Martin Leibowitz organized an Equity Risk Premium ERP Forum for CFA Institute in which the participants discussed issues related to the ERP and made estimates for the future This forum was repeated by Leibowitz Brett Hammond and Laurence Siegel in 2011 setting a precedent for a decennial forum Siegel organized and moderated the discussion in 2021 and the proceedings from that event make up the current book The participants in 2021 were in alphabetical order Robert Arnott Clifford Asness Mary Ida Compton Elroy Dimson William Goetzmann Roger Ibbotson Antti Ilmanen Martin Leibowitz Rajnish Mehra Thomas Philips and Jeremy Siegel Each participant made a presentation which was then discussed by the whole group Finally a roundtable discussion involving all of the participants was moderated by Laurence Siegel Ibbotson and Dimson discussed historical returns in different countries Ibbotson focused on the United States while Dimson took a global industrial country view The history goes back almost a century Ibbotson or more than a century Dimson providing a look at how returns have evolved over a wide variety of conditions Ibbotson also presented his method for making probabilistic forecasts of returns Dimson who is British showed that American exceptionalism is one way to understand the results Asness looked at the effectiveness of Robert Shiller s CAPE cyclically adjusted price earnings ratio valuation measure for forecasting Valuations rose over the period he studied and a lively discussion was had about why this may have occurred Arnott focused on the growth rate of dividends which has been very slow in per share terms and argued with much debate from the other participants that buybacks are only a partial substitute for dividends Leibowitz also looking at valuation as the lodestone of return forecasts set forth a growth adjustment that brought his forecast in line with those made by others Compton a consultant to pension plans discussed the challenges of communicating lower expected returns to clients She also emphasized that expected returns don t always come true they re just someone s best forecast Ilmanen broke up the expected return into its component parts dividends real growth inflation and so forth Doing this he said allows one to debate the estimates for each part and ascertain how accurate each of the estimates is Philips started by presenting a method for forecasting bond returns He then turned to equities for which he compared forecasts with subsequent realizations using a variety of forecast methods Mehra discussed a number of issues related to the existence of premiums equity risk value small cap and so forth and concluded that although some of these are unstable the ERP is highly stable Jeremy Siegel advocated a back to basics approach using dividend and earnings yields dividend and earnings growth rates payout ratios and price to earnings ratios He emphasized that earnings can be calculated in a number of different way and said that accounting practices have become more conservative over the years Goetzmann concluded the session by reporting that one company a water mill in France had almost 600 years of historical return data and that an asset pricing model could

be tested using those data According to this model the stock price is the present value of expected future dividends and is supported by the evidence In sum because of high valuations and low interest rates the participants expect lower total returns in the future than in the past A forward looking ERP of 4% to 5% was the consensus of the group
