**Beyond Power Transitions** David C. Kang,Xinru Ma,2024-10-08 Questions about the likelihood of conflict between the United States and China have dominated international policy discussion for years But the leading theory of power transitions between a declining hegemon and a rising rival is based exclusively on European examples such as the Peloponnesian War as chronicled by Thucydides as well as the rise of Germany under Bismarck and the

Anglo German rivalry of the nineteenth and early twentieth centuries What lessons does East Asian history offer for both the power transitions debate and the future of U S China relations Examining the rise and fall of East Asian powers over 1 500 years Beyond Power Transitions offers a new perspective on the forces that shape war and peace Xinru Ma and David C Kang argue that focusing on the East Asian experience underscores domestic risks and constraints on great powers not relative rise and decline in international competition They find that almost every regime transition before the twentieth century was instigated by internal challenges and even the exceptions deviated markedly from the predictions of power transition theory Instead East Asia was stable for a remarkably long time despite massive power differences because of common understandings about countries relative status Provocative and incisive this book challenges prevailing assumptions about the universality of power transition theory and shows why East Asian history has profound implications for international affairs today

**The Overproduction of Truth** Gianfranco Pacchioni, 2018-08-09 The way science is done has changed radically in recent years Scientific research and institutions which have long been characterized by passion dedication and reliability have increasingly less capacity for more ethical pursuits and are pressed by hard market laws From the vocation of a few science has become the profession of many possibly too many These trends come with consequences and risks such as the rise in fraud plagiarism and in particular the sheer volume of scientific publications often of little relevance The solution A slow approach with more emphasis on quality rather than quantity that will help us to rediscover the essential role of the responsible scientist This work is a critical review and assessment of present day policies and behavior in scientific production and publication It touches on the tumultuous growth of scientific journals in parallel with the growth of self declared scientists over the world The author s own reflections and experiences help us to understand the mechanisms of contemporary science Along with personal reminiscences of times past the author investigates the loopholes and hoaxes of pretend journals and nonexistent congresses so common today in the scientific arena The book also discusses the problems of bibliometric indices which have resulted in large part from the above distortions of scientific life

[Altmetrics for Information Professionals](#) Kim Johan Holmberg, 2015-09-03 The

goal of any research assessment is to evaluate the value or quality of the research in comparison to other research. As quality is highly subjective and difficult to measure, citations are used as a proxy. Citations are an important part of scholarly communication and a significant component of research evaluation with the assumption being that highly cited work has influenced the work of many other researchers and hence it is more valuable. Recently we have seen new online data sources being researched for this purpose and disruptive ideas with the power to change research assessment and perhaps even science as a whole have been born. Altmetrics is the new research area that investigates the potential of these new data source as indicators of the impact that research has made on the scientific community and beyond and thus possibly also as indicators of the societal impact of research. This book will present some of these new data sources, findings from earlier altmetrics research and the disruptive ideas that may radically change scholarly communication. Presents some of the key ideas and innovations in earlier research that have been driving the evolution from bibliometrics to webometrics and with the advent of social media to altmetrics. Discusses the shortcomings and pitfalls of bibliometrics in research evaluation and the potential of altmetrics to overcome some of these shortcomings. Presents some of the most important data sources of altmetrics, the aggregators and the different stakeholders. Reviews current research about altmetrics and discusses possible future trends. Presents a way to measure and aggregate altmetrics according to the level of impact or type of impact they represent.
