Functional Future for Bibliographic Control Shawne D. Miksa, 2017-07-05 The quest to evolve bibliographic control to an equal or greater standing within the current information environment is on going As information organizers we are working in a time where information and communication technology ICT has pushed our status quo to its limits and where innovation often needs the pressure of do or die in order to get started The year 2010 was designated as the Year of Cataloging Research and we made progress on studying the challenges facing metadata and information organization practices However one year of research is merely a drop in the bucket especially given the results of the Resource and Description and Access RDA National Test and the Library of Congress decision to investigate the possibility of transitioning the MARC21 format This book addresses how information

professionals can create a functional environment in which we move beyond just representing information resources and into an environment that both represents and connects at a deeper level. Most importantly, it offers insight on transitioning into new communities of practice and awareness by reassessing our purpose, re-charting our efforts, reasserting our expertise in the areas that information organizers have traditionally claimed but are losing due to stagnation and lack of vision. This book was published as a double special issue of the *Journal of Library Metadata*. ***Secondary School English Education in Asia*** Bernard Spolsky, Kiwan Sung, 2015-03-27. Continuing on from the previously published *Primary School English Language Education in Asia: From Policy to Practice* (Moon Spolsky, 2012), this book compiles the proceedings which took place at the 2011 annual conference of AsiaTEFL which took place in Seoul, Korea. NOTE: NO FURTHER DISCOUNT FOR THIS PRINT PRODUCT OVER STOCK SALE.** Significantly reduced list price. This new book from the NASA History Series tackles an interesting duo of biological problems that will be familiar to anybody who has seen photos of Apollo astronauts quarantined after their return to Earth. Namely, how do we avoid contaminating celestial bodies with earthly germs when we send spacecraft to study these bodies, and how do we avoid spreading foreign biological matter from space when our robotic and human spacefarers return to Earth? Biological matter from an external system could potentially cause an unchecked epidemic, either on Earth or in space, so strict precautions are necessary. Each time a space vehicle visits another world, it runs the risk of forever changing that extraterrestrial environment. We are surrounded on

Earth by a m lrange of different microorganisms and if some of these hitchhike onboard a space mission they could contaminate and start colonies on a different planet Such an occurrence would irrevocably alter the nature of that world compromise all future scientific exploration of the body and possibly damage any extant life on it By inadvertently carrying exotic organisms back to Earth on our spacecraft we also risk the release of biohazardous materials into our own ecosystem Such concerns were recognized by scientists even before the 1957 launch of Sputnik This book presents the history of planetary protection by tracing the responses to the above concerns on NASA s missions to the Moon Mars Venus Jupiter Saturn and many smaller bodies of our solar system The book relates the extensive efforts put forth by NASA to plan operations and prepare space vehicles that return exemplary science without contaminating the biospheres of other worlds or our own To protect irreplaceable environments NASA has committed to conducting space exploration in a manner that is protective of the bodies visited as well as of our own planet

Catastrophic Incentives Jeff Schlegelmilch, Ellen Carlin, 2023-10-03 Silver Award Winner 2024 Nonfiction Book Awards
Societies are vulnerable to any number of potential disasters earthquakes hurricanes infectious diseases terrorist attacks and many others Even though the dangers are often clear there is a persistent pattern of inadequate preparation and a failure to learn from experience Before disasters institutions pay insufficient attention to risk in the aftermath even when the lack of preparation led to a flawed response the focus shifts to patching holes instead of addressing the underlying problems Examining twenty years of disasters from 9 11 to COVID 19 Jeff Schlegelmilch and Ellen Carlin show how flawed incentive structures make the world more vulnerable when catastrophe strikes They explore how governments the private sector nonprofits and academia behave before during and after crises arguing that standard operational and business models have produced dysfunction Catastrophic Incentives reveals troubling patterns about what does and does not matter to the institutions that are responsible for dealing with disasters The short termism of electoral politics and corporate decision making the funding structure of nonprofits and the institutional dynamics shaping academic research have all contributed to a failure to build resilience Offering a comprehensive and incisive look at disaster governance Catastrophic Incentives provides timely recommendations for reimagining systems and institutions so that they are better equipped to manage twenty first century threats **Contemporary Issues in International Arbitration and Mediation** Arthur W.

Education Work for the Poor William Elliott, Melinda Lewis, 2018-07-03 Making Education Work for the Poor identifies wealth inequality as the gravest threat to the endangered American Dream Though studies have clearly illustrated that education is the primary path to upward mobility today educational outcomes are more directly determined by wealth than innate ability and exerted effort This accounting directly contradicts Americans understanding of the promise the American Dream is supposed to offer a level playing field and a path towards a more profitable future In this book the authors share their own stories of their journeys through the unequal U S education system One started from relative privilege and had her way to prosperity paved and her individual efforts augmented by institutional and structural support The other grew up in poverty and had to fight against currents to complete higher education only to find his ability to profit from that degree compromised by student debt To directly counter wealth inequality and make education the great equalizer that Americans
