Hall, 2008 Advancements in the field of engineering that have led to major inventions and

discoveries are built on the foundations of predecessors and their work. In many cases small steps are taken by a variety of researchers leading ultimately to a very momentous discovery. A Biographical Dictionary of People in Engineering Literature lists the work and contributions of thousands of people from many countries representing numerous fields of endeavor over many centuries. The ancient cultures of people in China, Arabia, India, and Japan, the renaissance culture of the Greeks, Egyptians, Romans, and in addition the European cultures of the Russians, Germans, French, and others all have contributed to what is now called engineering. The terms engineer and engineering are rather recent but former builders, architects, instrument makers, inventors, discoverers, and shop workers were part of the process. This work contains the necrologies, names, dates, and a brief biography up to the year 2000 of people who are found in engineering and invention literature. The names were culled from histories, biographies, literature, and handbooks, particularly from those reference titles including words such as distinguished, honored, leaders, outstanding, pioneers, prominent, recognized, renowned, and respected. The necrologies are necessarily abbreviated with the major employers and dates of employment and specialties listed and references to the sources of information. This book is a must for reference collections and those in the media who cover the field of engineering advancement.

Geotechnical Instrumentation for Monitoring Field Performance John Dunncliff, 1993-10-06. The first book on the subject written by a practitioner for practitioners. *Geotechnical Instrumentation for Monitoring Field Performance* goes far beyond a mere summary of the technical literature and manufacturers brochures; it guides readers through the entire geotechnical instrumentation process, showing them when to monitor safety and performance and how to do it well. This comprehensive guide describes the critical steps of planning monitoring programs using geotechnical instrumentation, including what benefits can be achieved and how construction specifications should be written. Describes and evaluates monitoring methods and recommends instruments for monitoring groundwater pressure, deformations, total stress in soil, stress change in rock, temperature, and load and strain in structural members. Offers detailed practical guidelines on instrument calibrations, installation, and maintenance, and on the collection, processing, and interpretation of instrumentation data. Describes the role of geotechnical instrumentation during the construction and operation phases of civil engineering projects, including braced excavations, embankments on soft ground, embankment dams, excavated and natural slopes, underground excavations, driving piles, and drilled shafts. Provides guidelines throughout the book on the best practices.
