

# I THE ORGANIZATION AND STRUCTURE OF THE HUMAN BODY

The human body is made up of a complex structure of systems that all work together. There are several levels of organization to this structure, with each level more complex than the last.

## Nervous system

Neuron

## Cells

Cells are the basic building blocks of the human body. Although all human cells share some basic characteristics, they can vary greatly based on their specialized functions. For example, nerve cells—also known as neurons—communicate with each other through electrochemical signals. Other examples of specialized cells found in the human body include muscle cells and blood cells.

## Muscular system

Muscle fibers

## Tissues

Together, groups of specialized cells form tissue. There are four basic types of tissue in the human body: muscle tissue, nervous tissue, connective tissue, and epithelial tissue. Muscle tissue might be the first thing that comes to mind when thinking about body tissue, but blood and bone are considered tissue as well—in this case, connective tissue. Epithelial tissue covers surfaces on both the inside and outside of the body; skin tissue is an epithelial tissue.

## Circulatory system

## Organs

Tissues form specialized structures called organs. Organs perform specific functions in the body. For example, the heart keeps blood flowing through its rhythmic contractions. Organs can be composed of any or all of the four basic tissue types. The heart, while mostly specialized muscle tissue, also contains nerve, connective, and epithelial tissues.

Heart

## Digestive system

## Organ Systems

Organ systems are groups of organs and tissues that all function together toward a single purpose. For example, the stomach, esophagus, and intestines are all part of the digestive system, which allows the human body to process and use nutrients. Other organ systems in the human body include the circulatory, respiratory, nervous, muscular, and skeletal systems.

Organizational Communication Structure J. David Johnson, 1993 Structural research in many ways is the most narrowly based of all the approaches to organizational communication This book seeks to broaden the perspective by discussing the heuristic value of each of the four major approaches for examining the larger concept of structure      Books in Series, 1876-1949: Titles , 1982      **Books in Series, 1876-1949: Series** , 1982      *Holt Biology* Rob DeSalle, Holt Rinehart and Winston, 2008 Holt Biology Student Edition 2008      *Books in Series* , 1982 Vols for 1980 issued in three parts Series Authors and Titles      **Human Physiology** Thomas Fairchild Morrison, 1963      The School Journal , 1906      New York School Journal , 1905      *Movements for Human Rights* David L. Brunsma, Keri Iyall Smith, Brian Gran, 2016-09-07 How do people work together to advance human rights Do people form groups to prevent human rights from being enforced Why In what ways do circumstances matter to the work of individuals collectively working to shape human rights practices Human society

is made of individuals within contexts tectonic plates not of the earth's crust but of groups and individuals who scrape and shift as we bump along competing for scarce resources and getting along. These movements large and small are the products of actions individuals take in communities within families and legal structures. These individuals are able to live longer yet continue to remain vulnerable to dangers arising from the environment substances struggles for power and a failure to understand that in most ways we are the same as our neighbors. Yet it is because we live together in layers of diverse communities that we want our ability to speak to be unhindered by others use spirituality to help us understand ourselves and others possess a space and objects that are ours alone and join with groups that share our values and interests including circumstances where we do not know who our fellow neighbor is. For this reason sociologists have identified the importance of movements and change in human societies. When we collaborate in groups individuals can change the contours of their daily lives. Within this book you will find the building blocks for human rights in our communities. To understand why sometimes we enjoy human rights and other times we experience vulnerability and risk sociologists seek to understand the individual within her context. Bringing together prominent sociologists to grapple with these questions. **Movements for Human Rights Locally and Globally** offers insights into the ways that people move for and against human rights. **A choice of futures** F. Emery, M. Emery, 2012-12-06 Exploration of the nature of human communication and the media is a pre requisite to any assessment of the likely future role of communications. We cannot assume that the nature of these things is transparently obvious to everyone and therefore commonly understood. Three developments in recent decades should adequately warn against such an assumption. First we had the fiasco of social scientists trying to apply Shannon's mathematical theory of information as if it were a theory of human communication. In Shannon's use of information we cannot speak of how much information a person has only how much a message has. Ackoff and Emery 1972 p 145 They would not have wandered into that blind alley if they had stopped to think about the nature of human communication. Second was the belated but wholehearted acceptance of the Heider theory of balance and its subsequent wane. Its wane had nothing to do with its inherent merits. It waned because it could not survive on the Procrustean bed of the psychologists theory of choice. It did not occur to the psychologists to question their assumptions about how people made the choices that lead to purposeful communication. Ackoff and Emery 1972 p 58 The last example has been the bitter and unended furore about McLuhan. This time the psychologists and sociologists have been strangely quiet but we can be sure this does not imply acquiescence in McLuhan's views.
