This article explores the pupils' approaches and development of measurement concepts in an intervention that involved an e-learning environment in school physics conducted in a developing country, namely Kenya. A total of 118 secondary pupils enrolled in schools that could be visited conveniently in Nakuru district, Kenya were exposed to an e-learning environment program (ELEP) in physics for a period of six weeks. The ELEP physics module was developed from a physics course dealing with the concept of measurement. It was chosen because the majority of teachers viewed it as a topic that is difficult to teach through the regular method. The course was based on the Kenya Institute of Education (KIE) approved syllabus for science education, science textbooks and other relevant materials. Part of the investigation was to gain insight on the pupils' approaches and reactions to having to learn measurement concepts through ELEP. In order to achieve this, they were interviewed and other information captured during the physics course to understand what really transpired when they were learning measurement concepts using the ELEP lesson plan. The participants' classroom behaviors were captured using the Physics Practical Lessons Analysis System (PPLAS) and Classroom Practical Work Assessment (CPWA). A selected group of pupils were also interviewed to gain insight into their own expressions using the Pupils' Interview Guide (PIG). The results showed effective approaches and reactions that the pupils exposed to the computer-supported lessons used to learn physics that differed markedly from those denied this program. For, the pupils in the experimental condition depended more on their peers and the program while their counterparts in the traditional class were solely dependent on the teacher. The study concludes that the use of ELEP to support conventional physics instruction can have substantial advantages over other instructional methods. Moreover, it proved that the use of ELEP enabled the learners not only to actively participate in the learning process and to engage fully in the instructional process but to also build a deeper understanding of measurement and procedural skills.

## Introduction

Measurement skills are the tools and processes that students utilize to quantify the phenomena around them and thereby develop the necessary measurement knowledge, attitudes and skills. As such, they need to develop a good foundation of measurement skills if they are to carry out their investigations in physics and other related subjects (Roth & Roychoudhury, 1992; Takuma, 1997; Smith, Casey, & Wiser, 1985; Linder, 1992; Kiboss & Ogunniyi, 2002). The secondary level syllabus emphasizes the following sub-topics as necessary to build a good foundation for the concept of measurement in secondary school physics: 1) estimation and measurement of mass, length, and time; 2) standard form and significant figures; 3) determination of area, volume, and density (Kenya Institute of Education [KIE], 1992). It is through them that the physics teachers are expected to assist learners to develop the following measurement knowledge and skills: 1) accurate use of measurement instruments; 2) selection of appropriate measurement instrument; 3) appropriate use of units; 4) correct application of nota-

tions and symbols; 5) explanation of concepts of area, volume, and density; 6) estimation of various quantities and expression of their values in standard form (KIE, 1992).

Pupils in secondary level often begin formal physics education with a system of physical conceptions that differ in deeply systematic ways from those of the physicist (Roth & Roychoudhury, 1992; Takuma, 1997; Smith et al., 1985). However, these alternate conceptions may manifest themselves as useful commonsense beliefs about the world (Smith et al., 1985; Linder, 1992; Kiboss & Ogunniyi, 2002). But these alternate conceptions are not addressed in introductory physics textbooks or by conventional physics classroom instruction (Roth & Roychoudhury, 1992; Takuma, 1997; Smith et al., 1985; Linder, 1992). Given the traditional mode of teaching that is common in most third world science classrooms (Kiboss, 2000), the likelihood of pupils departing from beginning physics without an adequate understanding of the necessary physics concepts presented is high. Consequently, there is a high chance that their conceptual understanding about the physical phenomena may eventually be left unchanged. It is therefore necessary to facilitate pupils to interactively develop physics concepts for themselves by em-
