

DEV PSYCH: LIFESPAN EXAM ONE – STUDY GUIDE

******Watch the videos that are posted on Canvas! I will include questions from these videos on the exam******

Chapter 1:

- Difference between life-span and life-expectancy
- Know chronological age, bio age, psych age, and social age.
- What is the new updated life-span perspective? What view has changed?
- Be able to define and give examples of normative age-graded influences, normative history-graded influences, and nonnormative life events.
- Define ethnicity and SES
- What does plasticity mean?
- Be able to explain epigenetics
- Why do some psychologists propose pushing back early adulthood time period to 30-45? Read this in your book.
- Steps to the scientific method – starting with observation!
- Must know the 5 different theoretical orientations. What does each mean? We spent a good amount of time reviewing this section in Chapter 1. Please read through this in your book! This means that you need to know the major researcher for each theory and what they proposed.
 - Example: You do not need to know the specifics for oral, anal, phallic, latency, and genital stage but you DO need to know Freud and that he's the one who introduced the psychosexual development perspective.
 - Example: Erikson's perspective is different than Freud because _____. I don't expect you to know all the exact info for each psychosocial stage yet. For now, you need to know why he proposed that theory. Why is it important?
 - Same goes for cognitive (Piaget and Vygotsky), Behaviorism (Skinner), Behavioral and Social Cognitive (Bandura), and Ethology (Lorenz and Bowlby).
 - What's another name for behaviorism and why?
- You do NOT need to review Ecological Theory or Information-Processing Theory
- Three kinds of descriptive research: observational studies (both types), case studies, and surveys/interviews) and be able to give examples of each.
- How do you decrease the social desirability effect? What is the wording effect?
- Correlation – what does r stand for? Which is the stronger correlation, $r = -.75$ or $r = .50$?
- Positive and negative correlation. Remember that both variables go in the same direction when they are positively correlated and both variables go in opposite directions when they are negatively correlated. Be able to apply these concepts to examples.
- **CORRELATION DOES NOT MEAN CAUSATION** – never ever use the word cause and effect when you are describing a correlation between variables. Instead say the relationship or association between variables.
- What are the two main requirements of a true experiment? Remember it is manipulation and random assignment.
- Independent variable and dependent variable. Be able to identify these in a word problem.
