**Autocar** ,2005      Pathways for a transition to a sustainable hydrogen transportation fuel infrastructure in California  
Marlene Hilkert,2004-02-20 Inhaltsangabe Abstract As society enters the 21st century there is a growing awareness of the burdens being placed on the planet as its ability to keep up with the demands of modern society are strained One of the major contributors to this burden happens to be a main resource required for sustained development Energy has always been and will always be a necessary resource for existence Since the industrial revolution fossil fuels such as coal and oil have been the main stay fuel to accommodate society s appetite As the demand for this resource increases the climatic and socio economic costs of this fuel become more acute and it is well documented that the supply of this fuel is not endless One of the major consumers of this fuel as a society is the transportation sector The processes in place which take it from the ground to its combustion as a fuel are some of the main culprits which adversely affect the planet This thesis explores the issues associated with the introduction of another energy resource Hydrogen as a replacement fuel for the transportation industry It is argued that for the transportation sector Hydrogen offers the most promising alternative as a fuel Making Hydrogen readily available and affordable through the retail infrastructure is of paramount importance if its widespread use is to be achieved The logistics of this are explored and it is believed that the introduction of small Hydrogen fuelers at existing retail outlets is the preferred method to instantiate the transition in the short to medium term Those fueling stations can utilize grid electricity to produce Hydrogen by the means of water electrolysis or take advantage of the existing Natural Gas distribution infrastructure to produce Hydrogen via steam reformation This thesis examines the Well to Wheels impacts and economic feasibility of those options and compares them to existing vehicle and fuel technologies The state of California was chosen as a target market due to its high automobile density the resulting pollution issues and its clear mandate on promoting alternative energy sources Inhaltsverzeichnis Table of Contents I Introduction2 1 Summary of the work2 2 Environmental economic and political challenges associated with the use of fossil fuels especially oil3 2 1Environmental and Social Problems with Fossil Fuels3 2 1 1Environmental pollution Oil spills and discharges3 2 1 2Environmental pollution Local      **Forum for Applied Research and Public Policy** ,1998      **Automotive Handbook** H. **Vehicle Propulsion Systems** L. Guzzella, Antonio Sciarretta, 2005

Automobiles are responsible for a substantial part of the world's consumption of primary energy mostly fossil liquid hydrocarbons The reduction of the fuel consumption of these vehicles has become a top priority Many ideas to reach that objective have been presented In most cases these systems are more complex than the traditional approaches For such complex systems a heuristic design approach fails The only way to deal with this situation is to employ model based methods This text provides an introduction to the mathematical modeling and subsequent optimization of vehicle propulsion systems and their supervisory control algorithms
