is becoming one of the most dynamic new fields of biology with the potential to revolutionize the way we do biotechnology today By applying the toolbox of engineering disciplines to biology a whole set of potential applications become possible ranging very widely across scientific and engineering disciplines Some of the potential benefits of synthetic biology such as the development of low cost drugs or the production of chemicals and energy by engineered bacteria are enormous There are however also potential and perceived risks due to deliberate or accidental damage Also ethical issues of synthetic biology just start being explored with hardly any ethicists specifically focusing on the area of synthetic biology This book will be the first of its kind focusing particularly on the safety security and ethical concerns and other relevant societal aspects of this new emerging field The foreseen impact of this book will be to stimulate a debate on these societal issues at an early stage Past experiences especially in the field of GM crops and stem cells have shown the importance of an early societal debate The community and informed stakeholders recognize this need but up to now discussions are fragmentary This book will be the first comprehensive overview on relevant societal issues of synthetic biology setting the scene for further important discussions within the scientific community and with civil society

Antoine Suarez,Joachim Huarte,2011-08-03 The central question of this book is whether or not particular cell entities of human origin ought to be considered human beings The answer is crucial for making moral decisions for or against research and experimentation Experts in the field discuss the production of embryonic like pluripotent stem cells by altered nuclear transfer parthenogenesis and reprogramming of adult somatic cells They thoroughly analyse the biological and moral status of different cell entities such as human stem cells embryos and human animal hybrid embryos and make a decisive step towards establishing final criteria for what constitutes a human being The topic is challenging in nature and of broad interest to all those concerned with current bioethical thought on embryonic human life and its implications for society *Geological Survey Professional Paper* Geological Survey (U.S.),1988 **U.S. Geological Survey Professional Paper** ,1958
