High-Performance Automotive Cooling Systems John F. Kershaw, 2019-06-15 When considering how well modern cars perform in many areas it is easy to forget some of the issues motorists had on a regular basis 40 years ago Cars needed maintenance regularly plugs and points had to be replaced on a frequent basis the expected engine life was 100 000 miles rather than double and triple the expectation that you see today and an everyday hassle especially in warm climates was being the victim of an overheating car It was not uncommon on a hot day to see cars stuck in traffic spewing coolant onto the ground with the hoods up in a desperate attempt to cool off Fast forward to today and it's easy to forget that modern cars even have coolant The temp needle moves to where it is supposed to be and never moves again until you shut the car off For drivers of vintage cars this level of reliability is also attainable In *High Performance Automotive Cooling Systems* author Dr John Kershaw explains the basics of a cooling system operation provides an examination of coolant and radiator options explains how to manage coolant speed through your engine and why it is important examines how to manage airflow through your radiator takes a thorough look at cooling fans and finally uses all this information in the testing and installation of all these components Muscle cars and hot rod engines today are pushed to the limit with stroker kits and power adders straining the capabilities of your cooling system to extremes never seen before Whether you are a fan of modern performance cars or a fan of more modern performance in vintage cars this book will help you build a robust cooling system to match today's horsepower demands and help you keep your cool

Change in Schools Gene Hall, Shirley Hord, 1987-03-06 This book summarizes nearly fifteen years of research in schools

research geared toward understanding and describing the change process as experienced by its participants. It addresses the question: What can educators and educational administrators do on a day-to-day basis to become more effective in facilitating beneficial change? The book provides research-based tools, techniques, and approaches that can help change facilitators to attain this goal. The authors contend that in order to be more effective, educators must be concerned with their approach to leadership. Early chapters deal with teachers' evolving attitudes, concerns, and perceptions of change, as well as their gradually developing skills in implementing promising educational innovations. The authors next turn to examine the role of the school principal and other leaders as change facilitators and present ways that they can become better informed about the developmental state of teachers, as well as how to use these diagnostic survey and data as the basis for facilitating the change process. The emphasis is on practical, day-to-day skills and techniques, showing administrators how to design and implement interventions that are supportive of teachers and others. Each chapter presents not only the concepts and research of the authors but also translates the concepts into concrete applications which illustrate the ways they can be applied to obtain genuine and lasting improvements. The book also contains an important discussion and description of the change process focusing on teachers' innovations and the schools.
