Installation, Operation and Maintenance Instructions

Figure 3. Chamber Purge with Positive Pressure

INSTALLATION

Use the two 1/4-20 tapped holes in the Bonnet to panel mount the Model 1600A. You can mount the regulator in any position without affecting its operation.

Clean all pipelines to remove dirt and scale before installation.

Apply a minimum amount of pipe compound to the male threads of the fitting only. **Do Not use teflon tape as a sealant.** Start with the third thread back and work away from the end of the fitting to avoid contaminating the regulator. Install the regulator in the air line.

The Inlet and Outlet ports are labeled "In" and "Out". Tighten all connections securely. Avoid undersized fittings that will limit the flow through the regulator. For more information, see Figure 1.

NOTES: Oil free air must be applied to the regulator. Use a filter to remove dirt and entrained liquid in the air line ahead of the regulator. If an air line lubricator is used, it **MUST** be located downstream of the regulator to avoid interference with performance.

OPERATION

The Model 1600A controls pressure in high flow systems above and below atmospheric pressure. To increase vacuum or decrease the positive pressure range, turn the Regulator Knob counterclockwise. To decrease vacuum or increase the positive pressure range, turn the knob clockwise. For more information, see Figure 1.

Applications can require a connection for fast evacuation of a Chamber. For more information, see Figure 2.

Applications can also require a connection to control system pressure above and below atmospheric pressure. In vacuum systems, you can leave the Supply Port open to atmosphere or pressurize with normal supply air for faster response. For more information, see Figure 3.
