The Digilent Genesys 2 board is an advanced, high-performance, ready-to-use digital circuit development platform based on the latest Kintex-7™ Field Programmable Gate Array (FPGA) from Xilinx. With its high-capacity, high-speed FPGA (Xilinx part number XC7K325T-2FFG900C), fast external memories, high-speed digital video ports, and wide expansions options make the Genesys 2 well suited for data and video processing applications. Several built-in peripherals, including Ethernet, audio and USB 2.0, allow a wide range of other applications. The fully-bonded® high-speed FMC HPC connector opens the door to great expansion possibilities.

Manuals and Reports on Engineering Practice ,1983 Supported Layered Double Hydroxides as CO₂ Adsorbents for Sorption-enhanced H₂ Production Diana Iruretagoyena Ferrer,2016-07-15 This thesis presents a combination of material synthesis and characterization with process modeling In it the CO₂ adsorption properties of hydrotalcites are enhanced through the production of novel supported hybrids carbon nanotubes and graphene oxide and the promotion with alkali metals Hydrogen is regarded as a sustainable energy carrier since the end users produce no carbon emissions However given that most of the hydrogen produced worldwide comes from fossil fuels its potential as a carbon free alternative depends on the ability to capture the carbon dioxide released during manufacture Sorption enhanced hydrogen production in which CO₂ is removed as it is formed can make a major contribution to achieving this The challenge is to find solid adsorbents with sufficient CO₂ capacity that can work in the right temperature window over repeated adsorption desorption cycles The book presents a highly detailed characterization of the materials together with an accurate measurement of their adsorption properties under dry conditions and in the presence of steam It demonstrates that even small quantities of graphene oxide provide superior thermal stability to hydrotalcites due to their compatible layered structure making them well suited as volume efficient adsorbents for CO₂ Lastly it identifies suitable catalysts for the overall sorption enhanced water gas shift process **Programming Techniques in Computer Aided Design** British Computer Society,1974

Bathe,2013-03-14 With the rapid development of computational capabilities nonlinear finite element analysis in structural mechanics has become an important field of research Its objective is the realistic assessment of the actual behavior of structures by numerical methods This requires that all nonlinear effects such as the nonlinear characteristics of the material and large deformations be taken into account The activities in this field being worldwide direct interaction between the various research groups is necessary to coordinate future research and to overcome the time gap between the generation of new results and their appearance in the literature The first U S Germany Symposium was held in 1976 at the Massachusetts Institute of Technology Under the general topic Formulations and Computational Algorithms in Finite Element Analysis it provided an opportunity for about 20 researchers from each country to present lectures hold discussions and establish mutual contacts The success of this first symposium was so encouraging that it seemed natural to organize a second bilateral meeting this time in Germany and to invite researchers from other European countries as well *CAD Systems* John J.
