

# What is a Comet?

**DIRECTIONS:** Read the paragraph. Answer the questions

A comet is a fairly small object that orbits the sun. Comets are made up of ice, dust, and small rocky particles. Comets were named by the Greek philosopher Aristotle, who thought comets were "stars with hair". The word "comet" comes from a Greek word meaning "hair of the head". When they get close enough to the Sun they get a fuzzy outline because the water, carbon dioxide and other compounds on their surface quickly change from solids to gases. This outline is called a coma. Sometimes comets also have a tail. Comets can be either short term (also called periodic) or long term. Short term comets take less than 200 years to orbit the sun; long term comets take more than 200 years. The best known comet is called Halley's Comet. It is a short term (periodic) comet. Humans have been observing Halley's Comet for thousands of years. Every 75 to 76 years you can see it with the naked eye, which means you don't need a telescope to see it. The last time it appeared was in 1986. It won't be visible to us again until 2061. Halley's Comet was the first comet to be recognized as having a periodic orbit.
