Les besoins en logements neufs ont atteint en France comme dans de nombreux autres pays un niveau très élevé en raison de la convergence de plusieurs facteurs : la vague démographique, le nombre des immeubles vides que l'on ne peut plus conserver, le ralentissement de la construction entre les deux guerres mondiales, les priorités accordées au juste titre à la reconstruction de l'appareil de production après la Seconde Guerre mondiale. Un ouvrage spécialement conçu pour le numérique, afin de donner plus sur l'habitat contemporain PROPOS DES GRANDS ARTICLES D'UNIVERSALIS. ouvrage est une rédition numérique d'un livre paru au XXe siècle désormais indisponible dans son format d'origine **Voile et navigation** Alain Gliksman, 1976-01-01T00:00:00+01:00 Dans le cadre de cet ouvrage adressé aux gens qui naviguent ou qui s'orientent en mer, Alain Gliksman qui s'est jusqu'à présent consacré aux problèmes théoriques se situe ici à un niveau concret en faisant le point sur l'ensemble des problèmes indissolubles de la pratique un peu plus riche que l'analyse de la propulsion et des réalisations. L'avancement, description critique du bateau et de ses éléments caractéristiques, point sur les divers matériaux utilisés dans la construction d'un voilier, étude du plan de voilure et analyse comparative de ses divers éléments, aspects théoriques et pratiques que présente la manœuvre d'un voilier, description et analyse des divers éléments dont il faut tenir compte pour la navigation. Il estime quelques notions générales sur la circulation de l'air et description du coup de vent type dans les zones océaniques et en Méditerranée précisément de navigation astronomique essentiellement pratique adaptée aux connaissances et aux techniques modernes. Il ne faut cependant pas se tromper : cet exposé technique est avant tout le fait d'un marin parlant de problèmes qu'il connaît et dont il sait apprécier et mesurer la juste importance. On peut sentir derrière les lignes de cet ouvrage tourné vers la pratique tel un filigrane mouvant la houle des océans et la morsure froide d'un embrun au lever du soleil *Dimensionnement des structures en bois* Pierre-André Dupraz, Markus Mooser, Denis Pflug, 2009-01-01 Cet ouvrage propose une approche méthodique du dimensionnement des structures en bois basées sur la norme SIA 265. Une introduction au matériau bois et aux concepts des normes complète l'ouvrage qui permet ainsi d'accueillir les bases nécessaires à la prise en compte pragmatique des spécificités du matériau dans une philosophie de dimensionnement proche des normes européennes rendue possible grâce à l'évolution des nouvelles normes Swisscode. L'ouvrage est conçu pour que les éléments indispensables au dimensionnement selon la norme SIA 265 soient disponibles en fonction du type de caractère. Il rassemble ainsi en fonction des sollicitations différentes correspondances entre les principes et méthodes de caractère liés à la construction en bois. Ce manuel permet également aux ingénieurs praticiens de disposer d'une référence les soutenant dans leurs missions de dimensionnement *Revue pratique du froid et du conditionnement de l'air*, 1981 *Charpentes métalliques* Manfred A. Hirt, Michel Crisinel, 2005-01-01 *Mémoires et compte rendu des travaux* Société des ingénieurs civils de France, 1965

La symbiose mycorhizienne Jean Garbaye, 2013-10-20 Nombre de plantes vertes terrestres vivent en association intime et mutualiste avec des champignons liés aux racines sous la forme d'organes mixtes appelés mycorhizes. Première synthèse approfondie et exhaustive en français sur le sujet, cet ouvrage présente les découvertes fondamentales les plus récentes et leurs applications pratiques en agronomie, horticulture, sylviculture et conservation des espaces naturels.
