S. Dwivedi,2018-10-17 The constant growth of the world s population and the decline of the availability of land and soil resources are global concerns for food security Other concerns are the decrease in productivity and delivery of essential ecosystems services because of the decline of soil quality and health by a range of degradation processes Key soil properties like soil bulk density organic carbon concentration plant available water capacity infiltration rate air porosity at field moisture capacity and nutrient reserves are crucial properties for soil functionality which refers to the capacity of soil to perform numerous functions These functions are difficult to measure directly and are estimated through indices of soil quality and soil health Soil degradation its extent and severity can also be estimated by

assessing indices of soil quality and health Geospatial Technology for Land Degradation Assessment and Management uses satellite imagery and remote sensing technologies to measure landscape parameters and terrain attributes Remote sensing and geospatial technologies are important tools in assessing the extent and the severity of land and soil degradation their temporal changes and geospatial distribution in a timely and cost effective manner The knowledge presented in the book by Dr R S Dwivedi shows how remote sensing data can be utilized for inventorying assessing and monitoring affected ecosystems and how this information can be integrated in the models of different local settings Through many land degradations studies land managers researchers and policymakers will find practical applications of geospatial technologies and future challenges The information presented is also relevant to advancing the Sustainable Development Goals of the United Nations towards global food security

*Deconstructing Dr. Strangelove* Sean M. Maloney,2020-07-01 King of the Cold War crisis film Dr Strangelove became a cultural touchstone from the moment of its release in 1964 The duck and cover generation saw it as a satire on nuclear issues and Cold War thinking Subsequent generations removed from the film s historical moment came to view it as a quasi documentary about an unfathomable secret world Sean M Maloney uses Dr Strangelove and other genre classics like Fail Safe and The Bedford Incident to investigate a curious pop cultural contradiction Nuclear crisis films

repeatedly portrayed the failures of the Cold War's deterrent system. Yet the system worked. What does this inconsistency tell us about the genre? What does it tell us about the deterrent system for that matter? Blending film analysis with Cold War history, Maloney looks at how the celluloid crises stack up against reality or at least as much of reality as we can reconstruct from these films with confidence. The result is a daring intellectual foray that casts new light on *Dr Strangelove*, one of the Cold War era's defining films.

An introduction to soils as a natural body with respect to their formation, physical and chemical properties, and their use during inventory of soils and soil classification is given in Chapter 5. The spectral response patterns of soils, including hyperspectral characteristics fundamental to deriving information on soils from spectral measurements and the techniques of soil resources mapping, are discussed in chapters 6 and 7 respectively. Furthermore, the creation of a digital soil resources database and the development of soil information systems, a very important aspect of storage and dissemination of digital soil data to the end users, are discussed in chapter 8.
