**Cost Accounting for Shared IT Infrastructures** Reinhard Brandl, 2008-08-21 During the past few years determining the value of IT has ranked high on the agenda of IT managers and Chief Information Officers CIOs The rather broad and abstract topic has been intensively discussed in the Information Systems literature for many years It turns into a very tangible problem in the field of IT cost accounting Nowadays corporate information systems are distributed systems A detailed measurement of resource demands of IT services on a distributed IT infrastructure and respective accounting and cost allocation turns out to be very expensive and impractical in most cases The large proportion of indirect costs and the difficulty of finding adequate allocation rates are a significant problem in practice regularly leading to free rider problems This problem has largely been ignored in the academic literature so far Dr Brandl proposes a method to derive estimators for the resource demand of service requests in a distributed IT infrastructure This estimator is based on a set of load tests and respective measurements as they are often performed during the deployment phase of new information systems Cost allocation keys can now be determined based on the number of service invocations per user or per department and the respective estimators While these measurements provide a lean method for the determination of usage based cost allocation keys it is not obvious that the estimators have sufficient accuracy in particular concerning different types of services and volatile workloads *IT Business Management: Solutions from SAP - A Pocket Guide* David Pultorak, Swen Conrad, 1970-01-01 Managing IT like a business demands integrated and systematic business and IT insight the kind of integration and systematic insight that SAP has spent the last 35 years helping the world's leading companies achieve Best run businesses use SAP solutions to automate key business processes so they can close the gap between strategy and execution Best run businesses drive clarity into their organizations by gaining insight for improved performance efficiency for optimized operations and flexibility to adapt quickly to changing circumstances Like best run businesses best run IT organizations are able to optimize operations maximize innovation and adjust rapidly to evolving business needs Their IT management solutions help them better understand themselves and their customers and make the best decisions in the face of challenging expectations and constraints This book outlines SAP's view on best run IT It will help orient you to our related solutions and provide you with ideas for driving clarity and business value in your IT organization **The Intranet Portal Guide** David Viney, 2005-07 An intranet portal project may well be the first and last project in your organisation that truly touches everyone from the office of your CEO to the newest recruit It may well be the most significant investment that you ever make in your people their processes and their systems and has the power and potential to transform your organisation However it can be a tough project to deliver bringing great exposure to its participants All your customers will be only a small march away down the corridor and will all know where you live Considering the 1.5 billion market for intranet portal technology worldwide there are surprisingly few books on the topic and those typically either very technical or very theoretical The Intranet Portal Guide is a deliberately

practical handbook for the stressed middle manager seeking to make things happen in their organisation The book is divided into three sections before during and after and 31 chapters addressing everything from the key issue of how to make the business case through to ongoing performance enhancement and benefit realisation It is packed full of tools templates plans and processes for successful delivery based on real life experience of implementation at two major UK companies
