Electron Distribution Review Worksheet Answers:

Relativistic Two-Temperature Electron Distributions Howard E. Brandt, HARRY DIAMOND LABS ADELPHI MD., 1980 An electron distribution function is formulated to appropriately describe a collisionless isotropic relativistic and nonequilibrium electron gas consisting of two populations of electrons one in temporal equilibrium at some cold temperature and the other at a hot temperature Characteristics of this two temperature relativistic electron distribution are discussed
Author *Basic Aspects of Secondary Electron Distributions*, 1975 Development of New Tools for Local Electron Distribution Analysis Eloy Ramos Cordoba, 2014 Some Factors Affecting the Electron Distribution in Atoms and Molecules Richard J. S. Crossley, 1964 **Electron Distribution Function and Mobility in III-V Compounds for High and Low Fields** S. H. Soh, B. W. Abraham-Shrauner, WASHINGTON UNIV ST LOUIS MO DEPT OF ELECTRICAL ENGINEERING., 1984 Electron distributions are calculated for low and high electric fields in III V semiconductors with polar optical scattering Approximate analytic expressions are derived by two analytic methods and compared to results found by a perturbation method and iteration method for low electric fields Electron mobility is calculated For high electric fields an expansion inversely in the electric field gives an approximate electron distribution function valid at low energies A non parabolic energy band and p wave scattering they and interdependent do not affect the asymmetrical part of the distribution function within the central valley hence they do not cause the negative differential resistance **On the Electron Distribution in Atoms and Ions** Jarl Axel Wasastjerna, 1933 *Electron Distributions and the Chemical Bond* P Coppens (ed), 1982 *Electron Distributions in Crystals* R. S. Calder, 1961 Electron Distribution Functions and Thermodynamic Properties at High Temperatures Malcolm K. Brachman, Roland E. Meyerott, 1953 The thermodynamic properties and equations of state of matter have been obtained from the Fermi Thomas statistical model of the atom generalized to include temperature effects by Feynman Metropolis and Teller For the computation of such quantities of the total energy of the system and equations of state which do not depend too strongly on the discrete properties of the energy levels of the atom this method seems to be ideally suited However for the computation of the Rosseland mean opacity or mean absorption coefficient which determines the heat transfer at high temperatures it is necessary to have detailed information about the occupation of the deep lying levels i e the K L M and N shells Thus for the opacity the method of computation is modified to yield this information

Electron Distribution Function in a Nonuniform, Magnetized, Weakly Photoionized Gas Application to a Model Ionosphere, 1975 The author presents a plasma kinetic model for the one particle electron distribution function in a dilute nonuniform magnetized weakly photoionized gas The model includes a phenomenological treatment of photoionization of the neutral species by an externally produced photon flux electron ion recombination electron neutral particle attachment elastic excitation deexcitation and ionizing electron neutral particle collisions and elastic electron electron and electron ion collisions Using known methods the author obtains approximate analytic formulae for the steady state electron distribution

function at energies much larger than the electron thermal energy For a model of the earth's ionospheric E and F regions at low latitudes numerical solutions for the steady state electron distribution function are given and compared to a curve fitted distribution function of Maxwellian form It is shown that the effective rate of production of electrons per unit volume is significantly enhanced due to ionizing electron neutral particle collisions Results for the electron concentration and the electron temperature are also given
