

Service

Special equipment and procedures are required to properly service most components of the hydraulic system, including pump, cylinders and control valve. See your John Deere dealer for these services.

OIL LINES AND HOSES

CAUTION: Escaping fluid under pressure can have sufficient force to penetrate the skin, causing serious personal injury. Before disconnecting lines, be sure to relieve all pressure. Before applying pressure to the system, be sure all connections are tight and that lines, pipes and hoses are not damaged. Fluid escaping from a very small hole can be almost invisible. Use a piece of cardboard or wood, rather than hands, to search for suspected leaks.

If injured by escaping fluid, see a doctor at once. Serious infection or reaction can develop if proper medical treatment is not administered immediately.

Check all oil lines and connections periodically for leaks and dents. Dented tubing can cause oil foaming, heat, faulty bulldozer operation, or pump failure. Oil leaks can be located by carefully inspecting the external area of the machine.

When tightening connections, always use two wrenches to prevent bending or breaking tubing.

IMPORTANT: Do not tighten fittings too tight. Tighten only enough to eliminate leaks.
