Programacion C

Introducción :

Hola mi nombre es Federico y los voy a conducir en la introducción a la programación en el Lenguaje C o también conocido como "Lenguaje de programación de sistemas" desarrollado en el año 1972 por Dennis Ritchie para UNIX un sistema operativo multiplataforma.

El lenguaje C es del tipo lenguaje estructurado como son PASCAL, FORTRAN, Basic. Sus instrucciones son muy parecidas a otros lenguajes incluyendo sentencias como if, else, for, do y while... .

Aunque C es un lenguaje de alto nivel (puesto que es estructurado y pose sentencias y funciones que simplifican su funcionamiento) tenemos la posibilidad de programar a bajo nivel (como en el ASSEMBLER tocando los registros memoria etc.).

Para simplificar el funcionamiento de el lenguaje C tiene incluidas librerías de funciones que pueden ser incluidas haciendo referencia la librería que las incluye es decir que si queremos usar una función para borrar la pantalla tendremos que incluir en nuestro programa la librería que tiene la función para borrar la pantalla.

Ventajas : La programación en C tiene una gran facilidad para escribir código compacto y sencillo a su misma vez.

En el lenguaje C no tenemos procedimientos como en otros lenguajes solamente tenemos funciones los procedimientos los simula y esta terminante mente prohibido escribir funciones , procedimientos y los comandos en mayúscula todo se escribe en minúsculas (a no ser las constantes ☺)

Los archivos en la C se escriben en texto puro de ASCII del Dos si se escribe en WORD por ejemplo el mismo incluye muchos códigos no entendidos por el compilador y generara errores ;una vez escrito se debe pasar a compilar el archivo; los archivos tienen 2 Extensiones **archivo.C** que es el archivo a compilar el que contiene todas los procedimientos funciones y código de nuestro programa y **archivo.h** que es las librerías que contienen las funciones de nuestro programa. (NOTA : El compilador genera Archivos con extensión .EXE)

Cada instrucción que pasemos a poner en C va segida de un punto y coma para decirle al compilador que hasta ahí llega la instrucción simula un Enter del teclado.
Ej.   *clrscr()*; /* borra la pantalla */
