Above is a portion of the output table reporting the ANOVA tests on the three dependent variables, abortions per 1000, divorces per 1000, and % Christian adherents. Note that only the F values for %Christian adherents and Divorces per 1000 population are significant at your criterion of .017. (Note: the MANOVA procedure doesn't seem to let you set different p levels for the overall test and the univariate tests, so the power here is higher than it would be if you did these tests separately in a ANOVA procedure and set p to .017 before you did the tests.)

How To Report Univariate Anova:

Designing and Reporting Experiments in Psychology Peter Harris, Matthew J. Easterbrook, Jessica S. Horst, 2021-08-20

This book will help undergraduate psychology students to write practical reports of experimental and other quantitative studies in psychology. It is designed to help with every stage of report writing and provides a resource that students can refer to throughout their degree up to and including when writing up a final year undergraduate project. Now fully updated in its fourth edition, this book maps to the seventh edition of the APA guidelines and offers more comprehensive advice, guidelines, and recommendations than ever before. Students will benefit from coverage of different forms of quantitative study, including online studies and studies that use questionnaires as well as experiments. A range of handy test yourself questions with answers at the end of the book. Self-reflection questions to prompt deeper understanding. Summary sections that articulate the main points and provide a useful revision aid. An Index of Concepts indicating where in the book every concept is introduced and defined. Updated advice on how to find and cite references. Expanded coverage of ethics in quantitative research, including how to write ethically. Common mistake symbols flagging areas where it's easy to be caught out. Peter Harris is Emeritus Professor of Psychology at the University of Sussex, UK, where he led the Social and Applied Psychology Group. He has taught research design and statistics for many years. He has published extensively in social and health psychology. Matthew J. Easterbrook is Senior Lecturer in Psychology at the University of Sussex, UK. He has taught statistics at a national and international level. Jessica S. Horst is Reader in Psychology at the University of Sussex, UK, where she is also the Director of Teaching and Learning. She has taught research methods in both the USA and the UK.

Applied Statistics: From Bivariate Through Multivariate Techniques Rebecca M. Warner, 2013. Rebecca M. Warner's *Applied Statistics: From Bivariate Through Multivariate Techniques*, Second Edition, provides a clear introduction to widely used topics in bivariate and multivariate statistics, including multiple regression, discriminant analysis, MANOVA, factor analysis, and binary logistic regression. The approach is applied and does not require formal mathematics; equations are accompanied by verbal explanations. Students are asked to think about the meaning of equations. Each chapter presents a complete empirical research example to illustrate the application of a specific method. Although SPSS examples are used throughout the book, the conceptual material will be helpful for users of different programs. Each chapter has a glossary and comprehension questions.

Applied Statistics II Rebecca M. Warner, 2020-01-14. Rebecca M. Warner's bestselling *Applied Statistics: From Bivariate Through Multivariate Techniques* has been split into two volumes for ease of use over a two-course sequence. *Applied Statistics II: Multivariable and Multivariate Techniques*, Third Edition, is a core multivariate statistics text based on chapters from the second half of the original book. The text begins with two new chapters: an introduction to the new statistics and a chapter on handling outliers and missing values. All chapters on statistical control and multivariable or multivariate analyses from the previous edition are retained, with the moderation chapter heavily revised and new chapters have been added on

structural equation modeling repeated measures and on additional statistical techniques Each chapter includes a complete example and begins by considering the types of research questions that chapter's technique can answer progresses to data screening and provides screen shots of SPSS menu selections and output and concludes with sample results sections By hand computation is used where possible to show how elements of the output are related to each other and to obtain confidence interval and effect size information when SPSS does not provide this Datasets are available on the accompanying website
