Chapters on the Modern Geometry of the Point, Line and Circle Richard Townsend, 1863 Chapters on the Modern Geometry of the Point, Line, and Circle; being the substance of lectures delivered in the University of Dublin to the candidates for honours of the first year in arts Richard TOWNSEND (Fellow of Trinity College, Dublin.), 1863 Geometry and Its Applications Walter Meyer, 2022-06-19 This unique textbook combines traditional geometry presents a contemporary approach that is grounded in real world applications It balances the deductive approach with discovery learning introduces axiomatic Euclidean and non Euclidean and transformational geometry The text integrates applications and examples throughout The Third Edition offers many updates including expanding on historical notes Geometry and Its Applications is a significant text for any college or university that focuses on geometry's usefulness in other disciplines It is especially appropriate for engineering and science majors as well as future mathematics teachers The Third Edition streamlines the treatment from the previous two editions Treatment of axiomatic geometry has been expanded Nearly 300 applications from all fields are included An emphasis on computer science related applications appeals to student interest Many new exercises keep the presentation fresh

Differential Geometry of Curves and Surfaces Manfredo P. do Carmo, 2016-12-14 One of the most widely used texts in its field this volume introduces the differential geometry of curves and surfaces in both local and global aspects The presentation departs from the traditional approach with its more extensive use of elementary linear algebra and its emphasis on basic geometrical facts rather than machinery or random details Many examples and exercises enhance the clear well written exposition along with hints and answers to some of the problems The treatment begins with a chapter on curves followed by explorations of regular surfaces the geometry of the Gauss map the intrinsic geometry of surfaces and global differential geometry Suitable for advanced undergraduates and graduate students of mathematics this text's prerequisites include an undergraduate course in linear algebra and some familiarity with the calculus of several variables For this second edition the author has corrected revised and updated the entire volume

Elements of Analytical Geometry George Alexander Gibson, Peter Pinkerton, 1919

Teaching School Mathematics: Pre-Algebra Hung-Hsi Wu, 2016-06-29 This is a systematic exposition of a major part of the mathematics of grades 5 to 8 excluding statistics written specifically for Common Core era teachers It differs from other books for teachers in that the mathematics is correct in the sense that all the concepts are clearly and correctly defined and a grade appropriate explanation that is proof is given for every assertion For example it gives a precise definition of percent and explains how to use the definition to do all the standard problems about percent in an entirely routine manner It also gives a leisurely explanation for negative times negative is positive Another key feature is an intuitive introduction to plane

geometry via rotations translations reflections and dilations that instead of treating these transformations as merely fun activities shows how they make sense of the usual geometric topics in middle school including congruence similarity length area and volume In short the readers will find in this volume a clear explanation of whatever was once puzzling to them in the mathematics of grades 5 to 8

A Course in Metric Geometry Dmitri Burago, Yuri Burago, Sergei Ivanov, 2022-01-27

Metric geometry is an approach to geometry based on the notion of length on a topological space This approach experienced a very fast development in the last few decades and penetrated into many other mathematical disciplines such as group theory dynamical systems and partial differential equations The objective of this graduate textbook is twofold to give a detailed exposition of basic notions and techniques used in the theory of length spaces and more generally to offer an elementary introduction into a broad variety of geometrical topics related to the notion of distance including Riemannian and Carnot Carath odory metrics the hyperbolic plane distance volume inequalities asymptotic geometry large scale coarse Gromov hyperbolic spaces convergence of metric spaces and Alexandrov spaces non positively and non negatively curved spaces The authors tend to work with easy to touch mathematical objects using easy to visualize methods The authors set a challenging goal of making the core parts of the book accessible to first year graduate students Most new concepts and methods are introduced and illustrated using simplest cases and avoiding technicalities The book contains many exercises which form a vital part of the exposition
