Journal of Industrial and Engineering Chemistry, 1909 **Parallel Programming** Thomas Rauber, Gudula Rünger, 2010-03-16 Innovations in hardware architecture like hyper threading or multicore processors mean that parallel computing resources are available for inexpensive desktop computers In only a few years many standard software products will be based on concepts of parallel programming implemented on such hardware and the range of applications will be much broader than that of scientific computing up to now the main application area for parallel computing Rauber and Rünger take up these recent developments in processor architecture by giving detailed descriptions of parallel programming techniques that are necessary for developing efficient programs for multicore processors as well as for parallel cluster systems and supercomputers Their book is structured in three main parts covering all areas of parallel computing the architecture of parallel systems parallel programming models and environments and the implementation of efficient application algorithms The emphasis lies on parallel programming techniques needed for different architectures The main goal of the book is to present parallel programming techniques that can be used in many situations for many application areas and which enable the reader to develop correct and efficient parallel programs Many examples and exercises are provided to show how to apply the techniques The book can be used as both a textbook for students and a reference book for professionals The presented material has been used for courses in parallel programming at different universities for many years *Universal Design 2016: Learning from the Past, Designing for the Future* H. Petrie, J. Darzentas, T.

Walsh, 2016-09-15 Universal Design is the term used to describe the design of products and environments which can be used by all people to the greatest extent possible without the need for adaptation or specialized design It is not a euphemism for designs for people with a disability but really is about designing to include all people regardless of their age ability cultural background or status in life However it remains the case that many designers and developers fail to understand the need for universal design and lack the skills needed to implement it This book presents papers from the 3rd International Conference

on Universal Design UD 2016 held in York UK in August 2016 The theme of the conference was learning from the past designing for the future and it aimed to bring together policymakers practitioners and researchers interested in the different strands of universal design to exchange ideas and best practice review some of the developments in universal design from the last 20 years and formulate strategies for taking the concept of universal design forward into the future The book is divided into two sections Section 1 About Universal Design and Section 2 Universal Design In Practice The book will be of interest to all those whose work involves design from the built environment and tangible products to communication services and systems
