Implementation Plan for EMR and Beyond Lori Katterhagen, 2013 Change is never easy for anyone but how we implement change can make the difference in how an innovation is accepted Over the last two years a small community hospital in California has introduced a new electronic medical record EMR to meet the requirements of meaningful use mandated by the Centers for Medicare and Medicaid CMS for all hospitals across the United States EMRs are expected to improve quality in many areas especially to improve outcomes while safely reducing costs U S Department of Health Human Services 2012 Adoption of EMR0 9s is not optional if facilities want to avoid penalties and continue operating As a result EMR0 9s have been implemented in numerous healthcare facilities over the last decade However implementation does not guarantee acceptance Many organizations have tried to implement something new and failed Healthcare facilities need to build implementation plans into their development of any new innovations In particular end users need to buy in and accept new system usability in order to improve compliance and employee satisfaction Our EMR is being developed in stages so our processes are constantly changing with requires fast transitions in the end user learning We have moved through the first

two stages and are moving into the third stage in the next few months This project describes an implementation plan for an electronic medical record development that we have used during our first two stages The project plan has a strategic focus on end user acceptance of meaningful use guidelines that is sustainable for continued growth The elements of this plan can be applied to other types of innovative change in healthcare *Complete Guide and Toolkit to Successful EHR Adoption*
