Introduction To Theory Of Computation By Thomson Direct:

Observed Brain Dynamics Partha Mitra, 2007-12-07 The biomedical sciences have recently undergone revolutionary change due to the ability to digitize and store large data sets In neuroscience the data sources include measurements of neural activity measured using electrode arrays EEG and MEG brain imaging data from PET fMRI and optical imaging methods Analysis visualization and management of these time series data sets is a growing field of research that has become increasingly important both for experimentalists and theorists interested in brain function Written by investigators who have played an important role in developing the subject and in its pedagogical exposition the current volume addresses the need for a textbook in this interdisciplinary area The book is written for a broad spectrum of readers ranging from physical scientists mathematicians and statisticians wishing to educate themselves about neuroscience to biologists who would like to learn time series analysis methods in particular and refresh their mathematical and statistical knowledge in general through self pedagogy It may also be used as a supplement for a quantitative course in neurobiology or as a textbook for instruction on neural signal processing The first part of the book contains a set of essays meant to provide conceptual background which are not technical and shall be generally accessible Salient features include the adoption of an active perspective of the nervous system an emphasis on function and a brief survey of different theoretical accounts in neuroscience The second part is the longest in the book and contains a refresher course in mathematics and statistics leading up to time series analysis techniques The third part contains applications of data analysis techniques to the range of data sources indicated above also available as part of the Chronux data analysis platform from <http://chronux.org> and the fourth part contains special topics

Agent-based Modeling of Tax Evasion Sascha Hokamp, Laszlo Gulyas, Matthew Koehler, Sanith Wijesinghe, 2018-02-12 The only single source guide to understanding using adapting and designing state of the art agent based modelling of tax evasion A computational method for simulating the behavior of individuals or groups and their effects on an entire system agent based modeling has proven itself to be a powerful new tool for detecting tax fraud While interdisciplinary groups and individuals working in the tax domain have published numerous articles in diverse peer reviewed journals and have presented their findings at international conferences until Agent based Modelling of Tax Evasion there was no authoritative single source guide to state of the art agent based tax evasion modeling techniques and technologies Featuring contributions from distinguished experts in the field from around the globe Agent Based Modelling of Tax Evasion provides in depth coverage of an array of field tested agent based tax evasion models Models are presented in a unified format so as to enable readers to systematically work their way through the various modeling alternatives available to them Three main components of each agent based model are explored in accordance with the Overview Design Concepts and Details ODD protocol each section of which contains several sub elements that help to illustrate the model clearly and that assist readers in replicating the modeling results described Presents models in a unified and structured manner to provide a point of reference for

readers interested in agent based modelling of tax evasion Explores the theoretical aspects and diversity of agent based modeling through the example of tax evasion Provides an overview of the characteristics of more than thirty agent based tax evasion frameworks Functions as a solid foundation for lectures and seminars on agent based modelling of tax evasion The only comprehensive treatment of agent based tax evasion models and their applications this book is an indispensable working resource for practitioners and tax evasion modelers both in the agent based computational domain and using other methodologies It is also an excellent pedagogical resource for teaching tax evasion modeling and or agent based modeling generally
