Decision Support Harvey J. Greenberg,Gautam Mitra,Freerk A. Lootsma,Marcel J. Rijckaert,Hans J. Zimmermann,2012-12-06 It is quite an onerous task to edit the proceedings of a two week long institute with learned contributors from many parts of the world All the same the editorial team has found the process of refereeing and reviewing the contributions worthwhile and completing the volume has proven to be a satisfying task In setting up the institute we had considered models and methods taken from a number of different disciplines As a result the whole institute preparing for it attending it and editing the proceedings proved to be an intense learning experience for us Here I speak on behalf of the committee and the editorial team By the time the institute took place the papers were delivered and the delegates exchanged their views the structure of the topics covered and their relative positioning appeared in a different light In editing the volume I felt compelled to introduce a new structure in grouping the papers The contents of this volume are organised in eight main sections set out below 1 Abstracts 2 Review Paper 3 Models with Multiple Criteria and Single or Multiple Decision Makers 4 Use of Optimisation Models as Decision Support Tools 5 Role of Information Systems in Decision Making Database and Model Management Issues 6 Methods of Artificial Intelligence in Decision Making Intelligent Knowledge Based Systems 7 Representation of Uncertainty in Mathematical Models and Knowledge Based Systems 8 Mathematical Basis for Constructing Models and Model Validation **Interior Point Methods of Mathematical Programming** Tamás

Terlaky,2013-12-01 One has to make everything as simple as possible but never more simple Albert Einstein Discovery consists of seeing what every body has seen and thinking what nobody has thought Albert S ent_Gyorgy The primary goal of this book is to provide an introduction to the theory of Interior Point Methods IPMs in Mathematical Programming At the

same time we try to present a quick overview of the impact of extensions of IPMs on smooth nonlinear optimization and to demonstrate the potential of IPMs for solving difficult practical problems The Simplex Method has dominated the theory and practice of mathematical programming since 1947 when Dantzig discovered it In the fifties and sixties several attempts were made to develop alternative solution methods At that time the principal base of interior point methods was also developed for example in the work of Frisch 1955 Carroll 1961 Huard 1967 Fiacco and McCormick 1968 and Dikin 1967 In 1972 Klee and Minty made explicit that in the worst case some variants of the simplex method may require an exponential amount of work to solve Linear Programming LP problems This was at the time when complexity theory became a topic of great interest People started to classify mathematical programming problems as efficiently in polynomial time solvable and as difficult NP hard problems For a while it remained open whether LP was solvable in polynomial time or not The breakthrough resolution of this problem was obtained by Khachiyan 1989
