Religious Education in Malawi and Ghana Yonah Matemba, Richardson Addai-Mununkum, 2021-03-15 Religious Education in Malawi and Ghana contributes to the literature on opportunities and complexities of inclusive approaches to Religious Education RE It analyses how RE in Malawi and Ghana engages with religious pluralisation and provides a compelling case for the need to re evaluate current approaches in the conceptualisation curriculum design and delivery of RE in schools in Malawi and Ghana The book explains how a pervasive tradition of selection involving exclusion and inclusion of religion in RE leads to misrepresentation and in turn to misclusion of non normative religions where religion is included but marginalized and misrepresented The book contributes to wider discourse of RE on opportunities as well as complexities of post confessional approaches including the need for RE to avoid perpetuating the continued legitimisation of selected religions and in the process the delegitimization of the religious other as a consequence of misrepresentation and misclusion Inspired by Braten s methodology for comparative studies in RE the book draws on two qualitative studies from Malawi and Ghana to highlight the pervasive problems of religious misclusion in RE This book will be of great interest for academics scholars and post graduate students in the fields of RE African education educational policy international education and comparative education

**Neuroscience** National Academies of Sciences, Engineering, and Medicine,Division on Earth and Life Studies,Health and Medicine Division,Board on Environmental Studies and Toxicology,Board on Health Sciences Policy,Forum on Neuroscience and Nervous System Disorders,2021-01-22 Humans are potentially exposed to more than 80 000 toxic chemicals in the environment yet their impacts on brain health and disease are not well understood The sheer number of these chemicals has overwhelmed the ability to determine their individual toxicity much less potential interactive effects Early life exposures to chemicals can have permanent consequences for neurodevelopment and for neurodegeneration in later life Toxic effects resulting from chemical exposure can interact with other risk factors such as prenatal stress and persistence of some chemicals in the brain over time may result in cumulative toxicity Because neurodevelopmental and neurodegenerative disorders such as attention deficit hyperactivity disorder and Parkinson s disease cannot be fully explained by genetic risk factors alone understanding the role of individual environmental chemical exposures is critical On June 25 2020 the National Academies of Sciences Engineering and Medicine s Forum on Neuroscience and Nervous System Disorders hosted a workshop to lay the foundation for future advances in environmental neuroscience The workshop was designed to explore new opportunities to bridge the gap between what is known about the genetic contribution to brain disorders and what is known and not known about the contribution of environmental influences as well as to discuss what is known about how genetic and environmental factors interact This publication summarizes the presentation and discussion of the workshop

**Reviews of Environmental Contamination and Toxicology Volume 233** David M. Whitacre,2014-11-03 Reviews of Environmental Contamination and Toxicology attempts to provide concise critical reviews of timely advances philosophy and significant areas of accomplished or needed endeavor in the total field of xenobiotics in any segment of the environment as well as toxicological implications *Ethylenethiourea* Sam Stuart,2013-10-22 Ethylenethiourea focuses on the occurrence of ethylenethiourea ETU as a terminal residue resulting from agricultural use of ethylenebisdithiocarbamate EBDC fungicides

The book first states that EBDC forms the most essential class of fungicides for controlling diseases of agricultural crops. The class includes mancozeb, maneb, nabam, metiram, and zineb. The text also underscores that findings have shown that ETU may occur in plant samples after the use of dithiocarbamate fungicides. Methodologies used in the experiments include thin layer chromatography, polarography, and radioisotope. The publication offers information on the chemistry of ETU, including formation, transformation, products of ETU photooxidation, and soil, plant, and animal metabolism. The book also reviews the dynamics and transformation of ETU residues and the processing and cooking effects of EBDCs. The book is a dependable reference for readers interested in the composition, reactions, effects, and transformations of EBDC fungicides.

Neurodegeneration: From Genetics to Molecules Victoria Campos-Peña, Marco Antonio Meraz-Ríos, Rosalinda Guevara-Guzmán, Karla Guadalupe Carvajal, 2016-11-15. Chronic degenerative diseases are one of the major public health problems, particularly those affecting the nervous system. They are characterized by the degeneration of specific cell populations that include several pathologies which contribute significantly to morbidity and mortality in the elderly population. Therefore, in recent years, the study of neuroscience has gained significant importance. Most of these neurodegenerative disorders are the result of a complex interaction between genetic and environmental factors that generate progression and can even determine its severity. The presence of mutations in genes such as LRRK2, SNCA, PARK7, PARK2, or PINK1 is associated with Parkinson's disease. Mutations in genes such as APP, PS1, and PS2 are associated with familial Alzheimer's disease, while HTT gene mutations are the cause of Huntington's disease. In most cases, this condition is inherited in an autosomal dominant pattern, which means one copy of the altered gene in each cell is sufficient to cause the disorder. It is known that these mutations can also alter the protein's function; however, it has not yet been possible to fully understand how some genetic changes cause the disease or influence the risk of developing these disorders. Most symptoms seen in these conditions occur when specific nerve cells are damaged or die, generating a loss in brain communication. Also, many of these mutations generate aggregation of intracellular or extracellular proteins, affecting cell function and eventually causing neuronal death. It is unclear whether the presence of these aggregates plays an important role in nerve cell death during the development of neurodegenerative diseases or if they are simply part of the response of cells to the disease. Other mutations affect mitochondrial function, generating alterations in energy production and promoting the formation of unstable molecules such as free radicals. Under normal conditions, the harmful effects caused by free radicals are offset within the cell. However, in pathological conditions, the presence of mutations can alter this process by allowing the accumulation of radicals and damaging or killing cells. On the other hand, we also know that these diseases may not have a direct genetic component; thus, the study of sporadic type neurodegenerative diseases is much more complex. Histopathological lesions, as well as the cellular and molecular alterations, are generally indistinguishable from familial cases. For this reason, it is important to understand the genetic and molecular mechanisms associated with this type of pathologies. In this sense, this issue aims to

understand the molecular processes that occur in the brain and how these are influenced by the environment genetics and behavior *Comptes Rendus 28th Conference* M. Williams,2013-10-22 *Comptes Rendus 28th Conference* contains information concerning the various aspects or activities during the National Adhering Organizations at 28th Council Meeting This book is composed of 69 chapters that include information on the members of different divisions and committees as well as the minutes of the 28th Council Meeting Neural Dynamics of Neurological Disease Christopher A. Shaw,2017-02-15 The emerging understanding of age related neurological disorders suggests that notions of a single causal gene toxin being responsible is likely incorrect Neurological disorders probably arise due to a unique intersection of multiple genetic and toxic factors combined with additional contributions of age stage of development immune system actions and more This perspective leads to the view that rather than reflecting only one pathway to end state disease each is a spectrum disorder and every individual case is therefore unique *Neural Dynamics of Neurological Disease* argues for a fundamental rethinking of what we think we know about neurological disorders how they arise and progress and crucially what might be done to cure them It first introduces the concept of neural dynamics of neurological disease then examines various diseases and gives examples of the interplay of elements such as neural systems cell types and biochemical pathways that can contribute to disease The concluding chapters point the way to how the emerging notion of neurological disease as a dynamic process may lead to more successful treatment options Providing a cross disciplinary approach to understanding the origin and progression of neurological disease *Neural Dynamics of Neurological Disease* is a timely and valuable resource for neuroscientists researchers and clinicians *Agrochemicals—Advances in Research and Application: 2012 Edition* ,2012-12-26 *Agrochemicals Advances in Research and Application 2012 Edition* is a ScholarlyEditions eBook that delivers timely authoritative and comprehensive information about Agrochemicals The editors have built *Agrochemicals Advances in Research and Application 2012 Edition* on the vast information databases of ScholarlyNews You can expect the information about Agrochemicals in this eBook to be deeper than what you can access anywhere else as well as consistently reliable authoritative informed and relevant The content of *Agrochemicals Advances in Research and Application 2012 Edition* has been produced by the world s leading scientists engineers analysts research institutions and companies All of the content is from peer reviewed sources and all of it is written assembled and edited by the editors at ScholarlyEditions and available exclusively from us You now have a source you can cite with authority confidence and credibility More information is available at <http://www.ScholarlyEditions.com> **Geomechanics and Geodynamics of Rock Masses** Vladimir Litvinenko,2018-05-15 *Geomechanics and Geodynamics of Rock Masses* contains contributions presented at EUROCK 2018 the 2018 International Symposium of the International Society for Rock Mechanics ISRM 2018 Saint Petersburg Russia 22-26 May 2018 Dedicated to recent advances and achievements in the fields of geomechanics and geotechnology the main topics of the book include Physical and mechanical properties of fractured rock laboratory testing and rock properties field
