Please answer the following questions using complete sentences using your textbook and powerpoint slides as a reference. This document is intended to help your studies, so the more effort you put into completing this study guide the better.

1. Define pathogenicity and virulence.
 - a. Pathogenicity- the ability to cause disease
 - b. Virulence- the degree of pathogenicity
2. List and describe the portals of entry for pathogens into the human body.
 - a. Mucous membranes
 - b. Skin
 - c. Parenteral route
3. Describe ID₅₀ and LD₅₀. How would these numbers be useful?
 - a. ID₅₀- infectious dose for 50% of a sample population, and measures virulence of a microbe
 - b. LD₅₀- lethal dose for 50% of a sample population, and measures potency of a toxin
4. Why does adherence contribute to pathogenicity? What cellular properties do pathogens use to increase adherence?
 - a. Almost all pathogens attach to a host tissues in a process called adherence
 - b. These cellular properties that pathogens use to increase adherence is glycocalyx and fimbriae
5. How do the following cellular structures contribute to pathogenicity: capsules, cell wall components, enzymes, and antigenic variation?
 - a. Capsules- glycocalyx around the cell wall and impair phagocytosis
 - b. Cell wall components- M protein resist phagocytosis (*Streptococcus pyogenes*), opa protein allows attachment to host cells (*Neisseria gonorrhoeae*), and waxy lipid (mycolic acid) resist digestion (*Mycobacterium tuberculosis*)
 - c. Enzymes- coagulases (coagulate fibrinogen), kinases (digest fibrin clots), hyaluronidase (digest polysaccharides that hold cells together), collagenase (breaks down collagen), and IgA proteases (destroy IgA antibodies)
 - d. Antigenic variation- pathogens alter their surface antigens (and antibodies are rendered ineffective)
6. What different mechanisms do pathogens use to penetrate, or enter a host cell?
 - a. Invasion
 - b. Use actin to move from one cell to the next
 - c. Survival inside phagocytes
7. How do biofilms increase the pathogenicity of bacteria?
 - a. Biofilms play a role in invading phagocytes, bio cell bacteria are more resistant to phagocytosis, shielded by extracellular polymeric substance (EPS) of biofilm

Mintzes,Emily M. Walter,2020-02-23 This book explores evidence based practice in college science teaching It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman s 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching In editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at

community and technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities In keeping with Wieman s challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book s final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base For most students that knowledge base is riddled with a host of na ve notions misconceptions and alternative conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for
