

Topic: Evaluate Expressions	Topic/Version: 1.1-1	Teacher:
-----------------------------	----------------------	----------

Lesson Overview	
1.OA.A.1 Use parentheses, brackets, or braces in numerical expressions, and evaluate expressions with these symbols.	Learning Target: I can evaluate expressions with parentheses, brackets, and braces by using the order of operations. Essential Understanding: There is an agreed-upon order in which operations are carried out in a numerical expression.

Solve and Share Problem
1. Pose the Solve and Share Problem (page 3.37): Jordan and Annika are working on $15 + 12 \div 3 + 5$. Jordan says the answer is 34 and Annika says the answer is 24. Who is right? 2. Check for understanding: What are you given? What are you asked to do? 3. Ask Guiding Questions As Needed: Does it matter what order you do the operations? If neither person made a mistake, who is correct? 4. Share and Discuss Solutions: Focus on the steps used to evaluate the expression. If needed, show and discuss Charlie's and Cameron's work. 5. Extension for Early Finishers: On the board, write $12 \div 25 \times 4 \times 2 \times 3$. In what steps would you evaluate this expression to get a value of 12? <i>first subtract, then divide, then add.</i>

Mini Lesson
Develop: Visual Learning (page 3.40): Jack evaluated $(7 \times 2) - 3 + 8 \div 2 \times 3$. To avoid getting more than one answer, he used the order of operations given at the right. Ask: What should Jack do first? <i>Evaluate the expression inside the parentheses.</i> Ask: What should Jack do next? <i>Evaluate the expression inside the brackets.</i> Ask: In Step 1, what would you do if there were no parentheses inside the brackets? <i>You would still multiply 7×2 first.</i> Ask: Why? <i>The order of operations says to do multiplication before subtraction.</i> Ask: In Step 2, you divide before you multiply. Would you get the same result if you multiply before you divide? <i>Sample answer: If you multiply 2×3, instead of dividing 8 by 2 and then multiplying by 3, you will get $12 \div 6 \times 3$, or 12. 1/3, instead of 1.3 for a final answer.</i> Ask: Why was a subtraction performed prior to Step 3? <i>Operations that appear inside parentheses or brackets are always done first.</i> Remind students that there is an agreed-upon way to evaluate expressions with two or more operations. Students should do the operations inside the parentheses, brackets, and braces first, then multiply and divide in order from left to right, and finally add and subtract in order from left to right. Connect and? – Would the value of $[2 + [(15 - 3) - 4]] \div 2$ change if the braces were removed? Explain. <i>Yes. The value of this expression is 4: Subtract 3 from 15 to get 12. Next subtract 4 from 12 to get 8. Then add 2 and 8. Divide the sum, 8, by 2 to get 4. Without the braces, the value would be 5: Subtract 3 from 15 to get 12. Then subtract 4 from 12 to get 8. Next divide 8 by 12 to get 2. Finally add 2 to 2 to get 5.</i>

Guided Practice
Students will use knowledge of evaluating expression to answer two questions in the guided practice portion.
