GEOMETRY

Independent events (a supply where one event does not affect the other)

To find the probability of two events occurring, you multiply the probability of each event

$$P(A \text{ and } B) = P(A) \times P(B)$$

Ex 1: If you roll a die and toss a coin, what is the probability of:
 a) Heads and 1
 b) Heads and tails

Ex 2: A person has 10 blue marbles and 10 red marbles in a bag. What is the probability of:
 a) Picking a blue

Dependent events

Ex 1: If you spin the spinner, what is the probability of getting a red sector?

Ex 2: If you spin the spinner, what is the probability of getting a red sector, then a blue sector?

Permutations

A permutation is an arrangement of objects in a specific order. It is the number of ways the objects can be arranged.

Example: Suppose that three students are competing for a specific placement in a race. How many ways can they be arranged?

1. First place, Second place, Third place
2. The number of ways to arrange 3 objects is 6
3. First, Second, and Third place for all

Combinations

A combination is a group of objects where the order does not matter.

Example: Suppose that three students are competing for a specific placement in a race. How many ways can they be arranged?

1. First place, Second place, Third place
2. The number of ways to arrange 3 objects is 6
3. First, Second, and Third place for all

Probability

The probability of an event is the number of favorable outcomes divided by the total number of possible outcomes.

Example: Suppose that three students are competing for a specific placement in a race. How many ways can they be arranged?

1. First place, Second place, Third place
2. The number of ways to arrange 3 objects is 6
3. First, Second, and Third place for all
