Ramsay, 1993 Calculus students should be expected to work on problems that require imagination outside reading and consultation cooperation and coherent writing They should work on open ended problems that admit several different approaches and call upon students to defend both their methodology and their conclusion Here is a source of 30 such projects p ix *Experimental Investigations of Optical Propagation in Atmospheric Turbulence* Michael W. Fitzmaurice, 1971 The pertinent theoretical background and the results of a group of experiments conducted over 0.4 and 1.17 km near ground horizontal ranges are presented 1 The log amplitude variances for HeNe 0.633 μ m and CO₂ 10.6 μ m laser beams were found to have a ratio of 26.8 which is in close agreement with the predictions of Rytov based spherical wave theory 2 Published measurements of the saturation level of the log amplitude variance are reviewed and several inconsistencies noted 3 The spatial correlation function of irradiance field was measured and found to agree with theory The degree of correlation between different frequency beams which had traversed the same optical path was also measured and compared to theory The data exhibited an unacceptably large scatter and did not show the wavelength dependence 4 The log normal Rayleigh and Rice probability distributions are discussed in terms of their applicability to irradiance statistics Relatively weak 10.6 μ m irradiance fluctuations were found to be equally well described by the log normal and Rice distributions strong fluctuations obtained at 0.488 μ m were clearly best described by the log normal distribution Investigations Representing the Departments University of Chicago, 1904 Scientific and Technical
