Epstein argues that the change was brought about not by changing material interests but by a powerful anti whaling discourse that successfully recast whales as extraordinary and intelligent endangered mammals that needed to be saved Epstein views whaling both as an object of analysis in its own right and as a lens for examining discursive power and how language materiality and action interact to shape international relations By focusing on discourse she develops an approach to the study of agency and the construction of interests that brings non state actors and individuals into the analysis of international politics Epstein analyzes the society of whaling states as a set of historical practices where the dominant discourse of the day legitimated the killing of whales rather than their protection She then looks at this whaling world s mirror image the rise from the political margins of an anti whaling discourse which orchestrated one of the first successful global environmental campaigns in which saving the whales ultimately became shorthand for saving the planet Finally she considers the continued dominance of a now taken for granted anti whaling discourse including its creation of identity categories that align with and sustain the existing international political order Epstein s synthesis of discourse power and identity politics brings the fields of international relations theory and global environmental politics into a fruitful dialogue that benefits both

Foreknowledge and Social Identity in 1 Peter Paul A. Himes, 2014-09-12 What is the meaning and significance of foreknowledge in the book of 1 Peter and how does the concept relate to the circumstances of its first recipients Himes attempts to answer these questions by examining the concepts of both foreknowledge and social identity within the first century and how they fit into the theology of 1 Peter In the process of elaborating the concepts of foreknowledge and social identity this study provides one of the first thorough examinations of the words prognosis and prognosko in the literature of the time period when 1 Peter was composed and circulated Himes argues that these words are linguistically relevant to how early hearers and readers would have understood the message of 1 Peter In addition this volume provides a thorough analysis of social scientific criticism in 1 Peter paying special attention to the various views about the social circumstances of the epistle s recipients Finally this book concerns itself with the biblical theology of 1 Peter and with how the concept of foreknowledge functions as a word of comfort and hope to the beleaguered audience of this epistle

Pediatric Trauma Care II AHC Media, LLC, 2014-03-17 Pediatric trauma continues to have a significant impact on the health and well being of children in the United States Trauma continues to be the leading cause of death in children 1 to 18 years of age and accounted for more than 14 000 deaths among all children 0 to 18 years of age In 2008 there were more than 8.6 million nonfatal injuries among newborn to 18 year olds with an injury rate of greater than 1 in 10 There is little debate that a coordinated effort and pediatric specific advances in pediatric trauma systems prehospital care and hospital care and injury prevention can have a positive impact on pediatric trauma outcomes in the United States However there are still gaps in access to centers that deliver pediatric focused trauma care especially in rural areas Furthermore there are differing views between different centers regarding the optimal approach to the initial evaluation and management of the

Keane, Michael Green, Szabolcs Kéri, 2015-05-11 Research on visual perception in schizophrenia has a long history However it is only recently that it has been included in mainstream efforts to understand the cognitive neuroscience of the disorder and to assist with biomarker and treatment development e g the NIMH CNTRICS and RDoC initiatives Advances in our understanding of visual disturbances in schizophrenia can tell us about both specific computational and neurobiological abnormalities and about the widespread computational and neurobiological abnormalities in the illness of which visual disturbances constitute well studied replicable low level examples Importantly far from being a passive sensory registration process visual perception is active inferential and hypothesis generating and therefore can provide excellent examples of breakdowns in general brain functions in schizophrenia Despite progress made in understanding visual processing disturbances in schizophrenia many challenges exist and many unexplored areas are in need of examination For example the directional relationships between perceptual and cognitive disturbances e g in attention memory executive function

predictive coding remain unclear in many cases as do links with symptoms including visual hallucinations The effect of specific visual disturbances on multisensory integration in schizophrenia has also not been explored In addition few studies of vision in schizophrenia have used naturalistic stimuli including real world objects and almost no studies have examined processing during interaction with objects or visual exploration which can provide important data on functioning of the perception for action pathway Relatedly studies of visual processing in schizophrenia have also not been conducted within contexts that include emotional stimulation and the presence of reinforcers characteristics of many real world situations and the consequences of this are likely to be an incomplete view of how and when perception is abnormal in the condition An additional important area involves treatment of visual disturbances in schizophrenia Two major questions regarding this are 1 can visual processing be improved in cases where it is impaired and by what types of interventions affecting which cognitive and neurobiological mechanisms and 2 what are the clinical and functional benefits of improving specific visual functions in people with schizophrenia Other important and understudied questions concern 1 the extent to which indices of visual functioning can serve as biomarkers such as predictors of relapse treatment response and or recovery 2 the potential role of visual functioning in diagnosing and predicting illness 3 the extent to which some visual perception disturbances are diagnostically specific to schizophrenia and 4 the extent to which visual disturbances are truly manifestations of disease as opposed to aspects of normal variation that in combination with disease serves to modify the clinical presentation This Frontiers Research Topic explores some of these and other issues facing this exciting interface between vision science and schizophrenia research We include papers that span the entire range of different Frontiers paper types including those that are data driven using psychophysics electroencephalography neuroimaging computational and animal models and other methods reviews hypotheses theories opinion methods areas of impact and historical perspectives
