

LM117/LM317A/LM317

3-Terminal Adjustable Regulator

General Description

The LM117 series of adjustable 3-terminal, positive voltage regulators is capable of supplying in excess of 1.5A over a 1.2V to 37V output range. They are exceptionally easy to adjust requiring only two external resistors to set the output voltage. Further, both line and load regulation are better than standard fixed regulators. Also, the LM117 is packaged in standard transistor packages which are easily mounted and handled.

In addition to higher performance than fixed regulators, the LM117 series offers full overload protection available only in IC's. Included on the chip are current limit, thermal overload protection and safe area protection. All overload protection circuitry remains fully functional even if the adjustable terminal is disconnected.

For 0.1% to 0.5% regulation, no capacitors are needed unless the device is subject to high frequency noise from the input filter capacitor or the output filter capacitor. In most cases, no capacitors are needed. An optional output capacitor can be used to improve transient response. The LM117 can be used in a wide range of applications to achieve very high PSRR's and excellent line and load regulation with standard 5% resistors.

Resistor tolerances and capacitor values are critical in many applications. For best results, use 1% resistors and 5% capacitors. Suppliers of standard and custom resistors can be regulated as long as the maximum input to output differential is not exceeded, i.e., avoid short-circuiting the output.

Adjustment makes an exceptionally simple adjustable set-point regulator, a programmable current regulator, or by connecting a load resistor between the adjustment pin and output, the LM117 can function as a precision current regulator. Regulated with electronic shutdown can be achieved by connecting the adjustment terminal to ground which programs the output to 1.2V where short loads deliver little current.

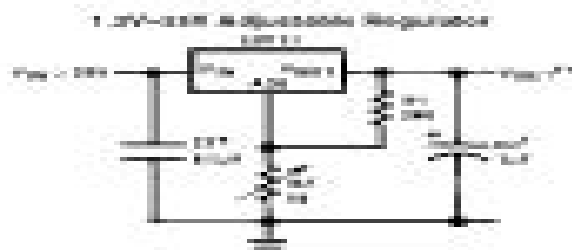

For applications requiring greater output current, see Limited Power GND and Limited Power GND data sheets. For the negative complement, see LM107 series data sheet.

Features

- Guaranteed 75V input voltage tolerance (LM117A)
- Guaranteed max. 1.0V to 37V line regulation (LM117A)
- Guaranteed max. 0.0% load regulation (LM117)
- Guaranteed 1.5A output current
- Adjustable output down to 1.2V
- Current limit constant with temperature
- IC Product Enhancement tested

- TO-220 package available
- TO-263 package available

Typical Applications

Full output current not available at high input/output voltages.
 *Bypass all decoupling capacitors with 0.1µF capacitors from their capacitors.
 *Optional—improved transient response. Output capacitance within range of 1µF to 100µF is suggested. A minimum capacitance is recommended to provide improved output impedance characteristics at frequencies.

$$I_{\text{max}} = 1.0A \left(1 + \frac{V_{\text{in}}}{V_{\text{out}}} \right) + 100\mu A$$
