Systems Katia Corsi, Nicola Giuseppe Castellano, Rita Lamboglia, Daniela Mancini, 2017-03-21 This book examines the relationship between digital innovations on the one hand and accounting and management information systems on the other. In particular, it addresses topics including cloud computing, data mining, XBRL, and digital platforms. It presents an analysis of how new technologies can reshape accounting and management information systems, enhancing their information potentialities and their ability to support decision making processes, as well as several studies that reveal how managerial information needs can affect and reshape the adoption of digital technologies. Focusing on the four major aspects: data management, information system architecture, external and internal reporting, the book offers a valuable resource for CIOs, CFOs, and more generally for business managers as well as for researchers and scholars. It is mainly based on a selection of the best papers, original, double-blind reviewed contributions presented at the 2015 Annual Conference of the Italian Chapter of the Association for Information Systems (AIS).
