Drug Repositioning Joel Dudley, Laura Berliocchi, 2017-07-14 Nervous system diseases represent a major health concern worldwide. Although important financial and professional investment, their etiology and pathophysiology still remain mostly elusive. Moreover, the clinical need of disease-modifying therapies is still unmet. In the last decades, traditional R D has failed in identifying new effective therapies in many medical areas, and drug repositioning has recently emerged as a promising alternative strategy to de novo drug discovery to improve and accelerate therapeutic development. For the first time, *Drug Repositioning: Approaches and Applications for Neurotherapeutics* reviews history and advances in drug repositioning with a special focus on therapeutics for nervous system diseases. International experts from Academia, Industry, and Non-profit organisations will provide different views on drug repositioning advantages, challenges, and specific applications which will be covered for nervous system diseases including Alzheimer's, Parkinson's, Huntington's diseases, Amyotrophic Lateral Sclerosis, Spinal Muscular Atrophy, ischemic stroke, and psychiatric disorders. This book provides a balanced overview and synthesis of drug repositioning concept, methods, and applications for neurotherapeutics. It represents a valuable resource for students, scientists, and clinicians working in academic settings, industry, and government agencies within the fields of neuroscience, pharmacology, neurology, pharmaceutical sciences, drug discovery, and development.

Environmental Contaminants and Neurological Disorders Muhammad Sajid, Hamid Akash, Kanwal Rehman, 2021-05-17 This volume discusses how environmental pollutants are involved in the pathogenesis of neurological disorders and covers specific mechanisms and risk factors, as well as the necessary strategies to reduce the adverse impacts of environmental pollutants on the human nervous system. With a collection of contributions from experts in environmental pollution, neurology, and pharmaceutical chemistry, the book provides both an introduction to the pathogenesis of neurodegeneration, including the types and different classes of neurological disorders, and studies demonstrating the clear link between environmental contaminants (e.g., pesticides, smoking, mycotoxins, persistent organic pollutants, POPs, polychlorinated biphenyls, phthalates, nanomaterials) and the development of neurological disorders in vulnerable populations. The book fills a gap in research on the topic by also covering the state of the art, treatment strategies, and mitigation measures for each type of pollutant. The book will be of interest to environmental scientists, pharmacologists, toxicologists, biochemists, biotechnologists, and food and drug regulatory organizations.
