System-on-a-Chip Designs Michael Keating, Pierre Bricaud, 2002 Reuse Methodology Manual for System on a Chip Designs Third Edition outlines a set of best practices for creating reusable designs for use in an SoC design methodology These practices are based on the authors experience in developing reusable designs as well as the experience of design teams in many companies around the world Silicon and tool technologies move so quickly that many of the details of design for reuse will undoubtedly continue to evolve over time But the fundamental aspects of the methodology described in this book have become widely adopted and are likely to form the foundation of chip design for some time to come Development methodology necessarily differs between system designers and processor designers as well as between DSP developers and chipset developers However there is a common set of problems facing everyone who is designing complex chips In response to these problems design teams have adopted a block based design approach that emphasizes design reuse Reusing macros sometimes called cores that have already been designed and verified helps to address all of the problems above However in adopting reuse based design design teams have run into a significant problem Reusing blocks that have not been explicitly designed for reuse has often provided little or no benefit to the team The effort to integrate a pre existing block into new designs can become prohibitively high if the block does not provide the right views the right documentation and the right functionality From this experience design teams have realized that reuse based design requires an explicit methodology for developing reusable macros that are easy to integrate into SoC designs This manual focuses on describing these techniques Features of the Third Edition Up to date State of the art Reuse as a solution for circuit designers A chronicle of best practices All chapters updated and revised Generic guidelines non tool specific Emphasis on hard IP and physical design
