injury they fulfill manifold functions in connective tissue remodeling and wound healing but overshooting activity of MFB on the other side induces fibrosis and cirrhosis The present e book Liver myofibroblasts contains 9 articles providing comprehensive information on hot topics of MFB In our opening editorial we provide a short overview of the origin of MFB and their relevance in extracellular matrix formation which is the hallmark of hepatic fibrosis Thereafter leading experts in the field share their current perspectives on special topics of i MFB in development and disease ii their role in hepatic fibrogenesis and iii promising therapies and targets that are suitable to interfere with hepatic fibrosis Knowledge, Creativity and Failure Chris Hay, 2016-09-17 This book offers a new framework for the analysis of teaching and learning in the creative arts It provides teachers with a vocabulary to describe what they teach and how they do this within the creative arts Teaching and learning in this field with its focus on the personal characteristics of the student and its insistence on intangible qualities like talent and creativity has long resisted traditional models of pedagogy In the brave new world of high stakes assessment and examination driven outcomes across the education system this resistance has proven to be a severe weakness and driven creative arts teachers further into the margins Instead of accepting this relegation teachers of creative arts must set out to capture the distinctiveness of their pedagogy This book will allow teachers to transcend the opaque metaphors that proliferate in the creative arts and instead to argue for the robustness and rigour of their practice

Breaking the cycle: attacking the malaria parasite in the liver Ute Frevert, Urszula Krzych, Thomas L. Richie, 2016-01-06 Despite significant progress in the global fight against malaria this parasitic infection is still responsible for nearly 300 million clinical cases and more than half a million deaths each year predominantly in African children less than 5 years of age The infection starts when mosquitoes transmit small numbers of parasites into the skin From here the parasites travel with the bloodstream to the liver where they undergo an initial round of replication and maturation to the next developmental stage that infects red blood cells A vaccine capable of blocking the clinically silent liver phase of the Plasmodium life cycle would prevent the subsequent symptomatic phase of this tropical disease including its frequently fatal manifestations such as severe anemia acute lung injury and cerebral malaria Parasitologists immunologists and vaccinologists have come to appreciate the complexity of the adaptive immune response against the liver stages of this deadly parasite Lymphocytes play a central role in the elimination of Plasmodium infected hepatocytes both in humans and animal models but our understanding of the exact cellular interactions and molecular effector mechanisms that lead to parasite killing within the complex hepatic microenvironment of an immune host is still rudimentary Nevertheless recent collaborative efforts have led to promising vaccine approaches based on liver stages that have conferred sterile immunity in humans the University of Oxford's Ad prime MVA boost vaccine the Naval Medical Research Center's DNA prime Ad boost vaccine Sanaria Inc's radiation attenuated whole sporozoite vaccine and Radboud University Medical Centre's and Sanaria's derived chemoprophylaxis with sporozoites vaccines The aim of this Research Topic is to bring together researchers with expertise in

malariology immunology hepatology antigen discovery and vaccine development to provide a better understanding of the basic biology of Plasmodium in the liver and the host's innate and adaptive immune responses Understanding the conditions required to generate complete protection in a vaccinated individual will bring us closer to our ultimate goal namely to develop a safe scalable and affordable malaria vaccine capable of inducing sustained high level protective immunity in the large proportion of the world's population constantly at risk of malaria

**Stem Cell Aging: Mechanisms, Consequences, Rejuvenation** Hartmut Geiger, Heinrich Jasper, Maria Carolina Florian, 2015-07-06 Aging of somatic stem cells reduces cell function and results in dysfunctional organs and tissues making it an underlying cause of diseases associated with aging It might even be the primary cause for age associated attrition of tissue function in organs that heavily rely on stem cells for maintaining homeostasis like the skin blood and intestines Understanding the molecular and cellular mechanisms involved is critical for developing approaches to attenuate stem cell aging and could pave the way for improved quality of life among the elderly Written by highly prominent experts in the field this book presents the current state of knowledge on these mechanisms It offers insights into stem cell function explains in detail the mechanisms of stem cell aging in model organisms as well as mammalian systems and describes related diseases and approaches to attenuating stem cell aging or achieving rejuvenation The book is intended for all scientists and clinicians working with stem cells aging mechanisms or age related diseases
