IT Interview Questions and Answers - English Navneet Singh, Here are some common IT interview questions along with suggested answers to help you prepare Technical Questions What is the difference between TCP and UDP Answer TCP Transmission Control Protocol is connection oriented meaning it requires a connection to be established before data can be sent It ensures data is delivered in the same order it was sent and checks for errors UDP User Datagram Protocol is connectionless and does not guarantee order or error checking making it faster but less reliable It is used for applications where speed is critical and some data loss is acceptable such as streaming video Explain the concept of normalization in databases Answer Normalization is the process of organizing data in a database to reduce redundancy and improve data integrity It involves dividing large tables into smaller related tables and defining relationships between them The main normal forms are 1NF First Normal Form 2NF Second Normal Form 3NF Third Normal Form and BCNF Boyce Codd Normal Form What are RESTful services Answer REST Representational State Transfer is an architectural style for designing networked applications RESTful services are web services that use HTTP methods GET POST PUT DELETE for communication They operate on resources identified by URLs and typically exchange data in formats like JSON or XML How does a VPN work Answer A VPN Virtual Private Network

creates a secure connection over a public network such as the internet. It uses encryption to protect data transmitted between the user's device and the VPN server. This ensures privacy and security, allowing users to access resources as if they were on a private network.

What is cloud computing? Answer: Cloud computing is the delivery of computing services—servers, storage, databases, networking, software, analytics, and more—over the internet, "the cloud." It offers faster innovation, flexible resources, and economies of scale. Users typically pay only for cloud services they use, helping to lower operating costs and run infrastructure more efficiently.

Behavioural Questions

Can you describe a time when you had to troubleshoot a difficult problem? Answer: Certainly. At my previous job, we had an issue where our main application server was intermittently crashing, causing significant downtime. I systematically analysed the server logs and used diagnostic tools to narrow down the issue to a memory leak in one of our recently deployed modules. I worked with the development team to patch the module, which resolved the issue and improved our system's stability.

How do you stay updated with the latest technology trends? Answer: I regularly follow industry news through tech blogs, podcasts, and websites like TechCrunch and Wired. I also participate in online courses and attend webinars and conferences.

Engaging in professional forums and communities like Stack Overflow and GitHub also helps me stay informed and connected with other professionals.

Describe a project you have worked on and your role in it. Answer: I recently worked on a project to migrate our company's on-premises data infrastructure to AWS. My role was to design the architecture, set up the AWS environment, and lead the data migration process. I coordinated with various teams to ensure minimal downtime and trained staff on using the new cloud-based tools. The project improved our scalability and reduced our infrastructure costs by 30%.

How do you prioritize tasks when you have multiple deadlines? Answer: I prioritize tasks based on their urgency and impact. I use tools like Trello or Jira to manage my tasks and deadlines. For critical projects, I break them down into smaller, manageable tasks and focus on completing high-priority items first.

Effective communication with my team also ensures we're aligned on priorities and deadlines.

How do you handle working under pressure? Answer: I stay calm and focused by breaking down the problem into smaller tasks and tackling them one at a time. I also prioritize tasks and delegate when possible. Taking short breaks to clear my mind helps me stay productive.

Communicating effectively with my team and stakeholders ensures everyone is aware of progress and any potential delays.

Scenario Based Questions

You discover a critical security vulnerability in a deployed application. What steps do you take? Answer: First, I would assess the vulnerability's impact and severity. Then, I would notify relevant stakeholders and work with the development team to develop and test a patch. If necessary, I would take immediate action to mitigate the risk, such as temporarily disabling the affected feature. After deploying the patch, I would conduct a thorough review to ensure the issue is resolved and update our security protocols to prevent future vulnerabilities.

How would you handle a situation where a key project is falling behind schedule? Answer: I would first analyse the reasons for the delay by reviewing the project plan and speaking with team members. I would then identify critical tasks and reallocate resources or adjust priorities to get back on

track Communicating with stakeholders about the delay and the steps being taken to address it is crucial If necessary I would also consider extending deadlines or bringing in additional help to ensure the project s success Technical Test Problem Solving Write a function to reverse a string in Python Python Describe how you would design a scalable web application Answer I would start with a microservices architecture breaking down the application into smaller independent services Each service would be containerized using Docker and managed with Kubernetes for orchestration I would use a load balancer to distribute traffic evenly and ensure high availability Data storage would be handled by a combination of relational and NoSQL databases depending on the requirements For scaling I would use auto scaling groups and implement caching mechanisms like Redis or Memcached to reduce database load Monitoring and logging tools like Prometheus and ELK stack would be used to track performance and troubleshoot issues
