Gavrilova, Vipin Kumar, Youngsong Mun, C.J. Kenneth Tan, Osvaldo Gervasi, 2004-04-29 The natural mission of Computational Science is to tackle all sorts of human problems and to work out intelligent automata aimed at alleviating the burden of working out suitable tools for solving complex problems For this reason Computational Science though originating from the need to solve the most challenging problems in science and engineering computational science is the key player in the fight to gain fundamental advances in astronomy biology chemistry environmental science physics and several other scientific and engineering disciplines is increasingly turning its attention to all fields of human activity In all activities in fact intensive computation information handling knowledge synthesis the use of ad hoc devices etc increasingly need to be

exploited and coordinated regardless of the location of both the users and the various and heterogeneous computing platforms. As a result, the key to understanding the explosive growth of this discipline lies in two adjectives that more and more appropriately refer to Computational Science and its applications: interoperable and ubiquitous. Numerous examples of ubiquitous and interoperable tools and applications are given in the present four LNCS volumes containing the contributions delivered at the 2004 International Conference on Computational Science and its Applications ICCSA 2004 held in Assisi, Italy, May 14-17, 2004.

Introduction to CICS Dynamic Scripting Chris Rayns, George Bogner, Regis David, Yun Peng Ge, Guo Liang Huang, Guan Jun Liu, James O'Grady, Adam Rice, Dennis Weiland, Zhi Qiu Xie, Helen Xue, IBM Redbooks, 2011-06-30. IBM CICS Transaction Server Feature Pack for Dynamic Scripting embeds and integrates technology from WebSphere sMash into the CICS TS V4.1 run time, helping to reduce the time and cost of CICS application development. The Feature Pack provides a robust managed environment for a wide range of situational applications, allowing PHP and Groovy developers to create reports, dashboards, and widgets, and integrate CICS assets into mash-ups and much more. The CICS Dynamic Scripting Feature Pack combines the benefits of scripted Web 2.0 applications with easy and secure access to CICS application and data resources. The Feature Pack includes a PHP 5.2 run time implemented in Java™ and with Groovy language support, support for native Java code, and access to many additional libraries and connectors to enhance the development and user experience of rich Internet applications. Access to CICS resources is achieved by using the JCICS APIs. In this IBM Redbooks publication, we introduce the Dynamic Scripting Feature Pack, show how to install and customize it, and provide examples for using it.

10th European Conference on Games Based Learning , Introduction to Compiler Construction in a Java World Bill Campbell, Swami Iyer, Bahar Akbal-Delibas, 2012-11-21. Immersing students in Java and the Java Virtual Machine (JVM). Introduction to Compiler Construction in a Java World enables a deep understanding of the Java programming language and its implementation. The text focuses on design, organization, and testing, helping students learn good software engineering skills and become better programmers. The book covers all of the standard compiler topics, including lexical analysis, parsing, abstract syntax trees, semantic analysis, code generation, and register allocation. The authors also demonstrate how JVM code can be translated to a register machine, specifically the MIPS architecture. In addition, they discuss recent strategies such as just-in-time compiling and hotspot compiling and present an overview of leading commercial compilers. Each chapter includes a mix of written exercises and programming projects. By working with and extending a real functional compiler, students develop a hands-on appreciation of how compilers work, how to write compilers, and how the Java language behaves. They also get invaluable practice working with a non-trivial Java program of more than 30,000 lines of code. Fully documented Java code for the compiler is accessible at <http://www.cs.umb.edu/j>.
