Journals Impact Factor More Than 2:

Research Fundamentals Mr. Rohit Manglik,2023-06-23 Introduces research principles including hypothesis formulation data collection and analysis Covers experimental and non experimental methods for scientific inquiry

Multidimensional Journal Evaluation Stefanie Haustein,2012-04-26 Scientific communication depends primarily on publishing in journals The most important indicator to determine the influence of a journal is the Impact Factor Since this factor only measures the average number of citations per article in a certain time window it can be argued that it does not reflect the actual value of a periodical This book defines five dimensions which build a framework for a multidimensional method of journal evaluation The author is winner of the Eugene Garfield Doctoral Dissertation Scholarship 2011

Handbook of Bibliometric Indicators Roberto Todeschini,Alberto Baccini,2016-05-04 At last the first systematic guide to the growing jungle of citation indices and other bibliometric indicators Written with the aim of providing a complete and unbiased overview of all available statistical measures for scientific productivity the core of this reference is an alphabetical dictionary of indices and other algorithms used to evaluate the importance and impact of researchers and their institutions In 150 major articles the authors describe all indices in strictly mathematical terms without passing judgement on their relative merit From widely used measures such as the journal impact factor or the h index to highly specialized indices all indicators currently in use in the sciences and humanities are described and their application explained The introductory section and the appendix contain a wealth of valuable supporting information on data sources tools and techniques for bibliometric and scientometric analysis for individual researchers as well as their funders and publishers

Seventh Conference of the International Society for Scientometrics and Informetrics Universidad de Colima,1999 **Thinking about Science**

Understanding the Successful Coordination of Team Behavior Silvan Steiner,Roland Seiler,Nancy J. Cooke,2017-12-05 In many areas of human life people perform in teams These teams performances depend at least partly on team members abilities to coordinate their contributions effectively This includes the making of decisions and the regulation of behavior in reference to the framework provided by the social group and task context Given the high relevance of a deepened and integrated understanding about the mechanisms underlying coordinated team behavior the aim of this research topic is to provide a platform for different theoretical and methodological approaches to researching and understanding coordinated team behavior in different task contexts The articles published in this edition offer a multifaceted insight into current work on the topic

Talent Management in Higher Education Marian Thunnissen,Paul Boselie,2024-05-21 The ebook edition of this title is Open Access and freely available to read online This short book aims to present an overview of empirical research on Talent Management and offers an integrated model that addresses the full nature and scope of TM in practice **Beyond Power Transitions** David C. Kang,Xinru Ma,2024-10-08 Questions about the likelihood of conflict between the United States and China have dominated international policy discussion for years But the leading theory of power transitions between a declining hegemon and a rising rival is based exclusively on European examples such as the Peloponnesian War as chronicled by Thucydides as well as the rise of Germany under Bismarck and the

Anglo German rivalry of the nineteenth and early twentieth centuries What lessons does East Asian history offer for both the power transitions debate and the future of U S China relations Examining the rise and fall of East Asian powers over 1 500 years Beyond Power Transitions offers a new perspective on the forces that shape war and peace Xinru Ma and David C Kang argue that focusing on the East Asian experience underscores domestic risks and constraints on great powers not relative rise and decline in international competition They find that almost every regime transition before the twentieth century was instigated by internal challenges and even the exceptions deviated markedly from the predictions of power transition theory Instead East Asia was stable for a remarkably long time despite massive power differences because of common understandings about countries relative status Provocative and incisive this book challenges prevailing assumptions about the universality of power transition theory and shows why East Asian history has profound implications for international affairs today

The Overproduction of Truth Gianfranco Pacchioni,2018-08-09 The way science is done has changed radically in recent years Scientific research and institutions which have long been characterized by passion dedication and reliability have increasingly less capacity for more ethical pursuits and are pressed by hard market laws From the vocation of a few science has become the profession of many possibly too many These trends come with consequences and risks such as the rise in fraud plagiarism and in particular the sheer volume of scientific publications often of little relevance The solution A slow approach with more emphasis on quality rather than quantity that will help us to rediscover the essential role of the responsible scientist This work is a critical review and assessment of present day policies and behavior in scientific production and publication It touches on the tumultuous growth of scientific journals in parallel with the growth of self declared scientists over the world The author s own reflections and experiences help us to understand the mechanisms of contemporary science Along with personal reminiscences of times past the author investigates the loopholes and hoaxes of pretend journals and nonexistent congresses so common today in the scientific arena The book also discusses the problems of bibliometric indices which have resulted in large part from the above distortions of scientific life

Error and Fraud

Geoffrey P. Webb,2021-06-21 This fascinating book gives readers an appreciation of how biomedical research should work and how the reality is all too often seriously flawed Explaining the logical basis of the different research approaches used by biomedical research scientists and their relative merits it will help readers to make more realistic appraisal of media reports linking aspects of lifestyle environment or diet to health outcomes and thus judge whether such claims are a real effect worthy of consideration for behavior change or deserving of further research resources Key features increases awareness of research fraud and some of the characteristics of fraudulent science and scientific fraudsters shows that whilst outright fraud may be uncommon fudging of results to help achieve statistical significance may be more prevalent incorporates real life case studies highlighting some of the infamous cases of research fraud and major scientific mistakes and the impact that they have had provides a convenient overview of the research process in the biomedical sciences with a focus on research

strategy rather than individual methods find supplemental detail on the author's blog <https://drgeoffnutrition.wordpress.com> about By raising awareness of the possibility that research data may have been dishonestly generated and outlining some of the signs and symptoms that might suggest data fabrication Error and Fraud The Dark Side of Biomedical Research will help students and researchers to identify the strengths and limitations of different research approaches and allow them to make a realistic evaluations of their own and others research findings

Advances on P2P, Parallel, Grid, Cloud and Internet Computing Leonard Barolli, 2024-11-16 This book aims to provide the latest research findings innovative research results methods and development techniques from both theoretical and practical perspectives related to P2P Parallel Grid Cloud and Internet computing and to reveal synergies among such large scale computing paradigms P2P Grid Cloud and Internet computing technologies have been very fast established as breakthrough paradigms for solving complex problems by enabling aggregation and sharing of an increasing variety of distributed computational resources at large scale Grid Computing originated as a paradigm for high performance computing as an alternative to expensive supercomputers through different forms of large scale distributed computing P2P Computing emerged as a new paradigm after client server and web based computing and has shown useful to the development of social networking business to business B2B business to consumer B2C business to government B2G business to employee B2E and so on Parallel Computing is an essential computational paradigm for solving complicated problems quickly It divides a scientific computing problem into several small computing tasks and concurrently runs these tasks by utilizing parallel hardware and overcoming the memory constraint Parallel computing is an important part of cloud environment However there are significant differences between cloud computing and parallel computing Cloud Computing has been defined as a computing paradigm where the boundaries of computing are determined by economic rationale rather than technical limits Cloud computing has fast become the computing paradigm with applicability and adoption in all application domains and providing utility computing at large scale Finally Internet Computing is the basis of any large scale distributed computing paradigms it has very fast developed into a vast area of flourishing field with enormous impact on today's information societies serving thus as a universal platform comprising a large variety of computing forms such as Grid P2P Cloud and mobile computing

goal of any research assessment is to evaluate the value or quality of the research in comparison to other research As quality is highly subjective and difficult to measure citations are used as a proxy Citations are an important part of scholarly communication and a significant component of research evaluation with the assumption being that highly cited work has influenced the work of many other researchers and hence it is more valuable Recently we have seen new online data sources being researched for this purpose and disruptive ideas with the power to change research assessment and perhaps even science as a whole have been born Altmetrics is the new research area that investigates the potential of these new data source as indicators of the impact that research has made on the scientific community and beyond and thus possibly also as indicators of the societal impact of research This book will present some of these new data sources findings from earlier altmetrics research and the disruptive ideas that may radically change scholarly communication Presents some of the key ideas and innovations in earlier research that have been driving the evolution from bibliometrics to webometrics and with the advent of social media to altmetrics Discusses the shortcomings and pitfalls of bibliometrics in research evaluation and the potential of altmetrics to overcome some of these shortcomings Presents some of the most important data sources of altmetrics the aggregators and the different stakeholders Reviews current research about altmetrics and discusses possible future trends Presents a way to measure and aggregate altmetrics according to the level of impact or type of impact they represent [**The Clinical Practice of Drug Information**](#) Michael Gabay,2015-03-09 This resource will educate students and pharmacists on traditional drug information topics while providing an extensive background on more recent practice areas This is a user friendly text with multiple examples that can be used in education and training as well as clinical practice Each chapter includes learning objectives key terms example [**Introduction to Scientific Publishing**](#) Andreas Öchsner,2013-06-28 This book is a very concise introduction to the basic knowledge of scientific publishing It starts with the basics of writing a scientific paper and recalls the different types of scientific documents In gives an overview on the major scientific publishing companies and different business models The book also introduces to abstracting and indexing services and how they can be used for the evaluation of science scientists and institutions Last but not least this short book faces the problem of plagiarism and publication ethics
