Machner, 2018-12-07 Legionella pneumophila was first isolated as the causative agent of a deadly infectious pneumonia at a convention of the American Legion forty years ago Since then Legionnaires disease continues to be a significant public health concern Today our understanding of the Legionella genus comprising environmental bacteria and opportunistic human pathogens has dramatically increased The study of how pathogenic Legionella interact with host cells both protozoan and mammalian has not only taught us about host pathogen interactions but has revealed novel and unexpected insights into human cell biology and immunology The capacity of pathogenic Legionella to commandeer cellular processes such as eukaryotic vesicular trafficking to establish an ER like replicative niche reflects the exquisite ability of this pathogen to manipulate eukaryotic cell biology in order to replicate in an intracellular compartment This requires the specific and targeted action of a cohort of translocated bacterial effector proteins In addition we have learnt much about cell autonomous

innate immune sensing of intracellular bacteria through the inability of *L. pneumophila* to avoid intracellular mammalian defense mechanisms. Now in the age of large scale comparative omics it is clear that different *Legionella* species utilize different cohorts of effectors to replicate inside eukaryotic cells. While we understand some of the strategies employed by *L. pneumophila* and *L. longbeachae* to replicate within eukaryotic cells there is still much to learn about many aspects of the *Legionella* life cycle. This Research Topic highlights the latest findings regarding the biology of *Legionella* species, their interactions with eukaryotic host cells and how the application of various technologies has increased our understanding of this important pathogen.

Fundamentals of Cancer Pain Management Andrew Leitner, Christine Chang, 2021-09-20

This book presents a timely and multidisciplinary update on the modalities currently available for treating the most feared symptom of patients diagnosed with cancer. The various cancer pain syndromes are explored in detail covering those related directly to malignancy and those due to the after effects of cancer therapy. Treatment modalities including pharmacologic approaches, interventional procedures and palliative surgical options are discussed clearly and concisely with provision of recommendations for the practitioner. Further topics include new and emerging treatments for cancer pain survivorship, considerations, pain management in special populations and implementation of systems based pain programs. The book has been written by a multidisciplinary group of experts reflecting the evolution in pain and symptom management that has occurred in parallel with progress toward more targeted oncologic treatments. Oncologists, palliative care physicians, allied health professionals and other practitioners involved in caring for cancer patients will find *Fundamentals of Cancer Pain Management* to be a rich source of evidence based insights into effective pain management.

Early Detection and Intervention in Audiology Katijah Khoza-Shangase, Amisha Kanji, 2021-02-01

A textbook with case studies for audiologists and speech pathologists to make recommendations for early detection and intervention of hearing impairments in the South African context. Early hearing detection and intervention (EHDI) is the gold standard for any practicing audiologist and for families of infants and children with hearing impairment. EHDI programs aim to identify, diagnose and provide intervention to children with hearing impairment from as early as six months old as well as those at risk for hearing impairment to ensure they develop and achieve to their potential. Yet EHDI remains a significant challenge for Africa and various initiatives are in place to address this gap in transferring policy into practice within the southern African context. The diversity of factors in the southern African context presents unique challenges to teaching and research in this field which has prompted this book project. The South African government's heightened focus on increasing access to health care which includes ongoing Early Childhood Development (ECD) programs make this an opportune time for establishing and documenting evidence based research for current undergraduate and postgraduate students.
