42. The solvent is the substance in which the solute is dissolved.
43. Random collisions of the solvent molecules with the solute particles provide enough force to overcome gravity.
44. **solubility**: the amount of a substance that dissolves in a given quantity of solvent at specified conditions of temperature and pressure to produce a saturated solution.
saturated solution: a solution containing the maximum amount of solute for a given amount of solvent at a constant temperature and pressure. **unsaturated solution**: a solution that contains less solute than a saturated solution at a given temperature and pressure. **miscible**: describes liquids that dissolve in each other. **immiscible**: describes liquids that are insoluble in each other.
45. Particles of solute crystallize.
46. No; if there were undissolved solute, the excess solute would come out of a supersaturated solution.
47. 5.55×10^2 g AgNO_3
48. Solubility increases with pressure.
49. a. 1.6×10^{-2} g/L
b. 4.7×10^{-2} g/L
50. Dilute and concentrated are relative terms and are not quantitative. Molarity provides the exact number of moles of solute per liter of solution.
51. Molarity is the number of moles of solute dissolved in one liter of solution.
a. 1.3M KCl
b. 3.3×10^{-1} M MgCl_2
52. 2.00×10^3 mL
53. a. 5.0×10^{-1} mol NaCl, 29 g NaCl
b. 1.0 mol KNO_3 , 1.0×10^2 g KNO_3
c. 2.5×10^3 mol CaCl_2 , 2.8 g CaCl_2
54. a. 2.3×10^3 g NaCl
b. 2.0 g MgCl_2
55. a. 16% (v/v) ethanol
b. 63.6% (v/v) isopropyl alcohol
56. Colligative properties are properties of a solution that depend only on the number of solute particles; boiling-point elevation, freezing-point depression, and vapor-pressure lowering. Boiling points are elevated because shells of solvent form around solute particles, reducing the amount of solvent molecules that have sufficient energy to escape the solution; relative to the pure solvent, the amount of energy required to cause vaporization or boiling increases. Solutes disrupt the ordering of the solvent structure, so more kinetic energy must be withdrawn from a solution for it to solidify. This lowers the freezing point of the solution.
57. a. sea water
b. 1.5M KNO_3
c. 0.100M MgCl_2
58. The effective molality of the $\text{Ca}(\text{NO}_3)_2$ solution is 3m. The effective molality of the NaNO_3 solution is 2m.
59. When vapor pressure is lowered relative to pure solvent, more energy must be supplied to reach the boiling point; thus the boiling point is increased relative to pure solvent.
60. The salt lowers the freezing point of the ice-water cooling mixture.
61. 1M solution: 1 mol of solute in 1 L of solution; 1m solution: 1 mol of solute in 1000 g of solvent
62. Add 27.0 g H_2O to 32.0 g CH_3OH .
63. a. 100.26°C
b. 101.54°C
64. a. -4.46°C
b. -2.2°C
65. a. -1.1°C
b. -0.74°C
c. -1.5°C

Understanding Concepts

66. a. The freezing-point depression is twice as great for solute B; solute B must provide twice as many particles in solution.

The Emotionally Agile Brain J.D. Pincus, 2024-12-17 A revolution has been quietly taking place in academic psychology economics neuroscience marketing and business In study after study emotional forces massively outweigh human rationality in determining our actual choices and actions This insight has reshaped both science and industry as its power is harnessed for commercial ends Those of us who are engaged in the nexus of neuroscience psychology and human potential have an obligation to raise awareness of these discoveries and more importantly to use them to actually improve people s lives AgileBrain is based on decades of psychological research conducted by the author and others published in peer reviewed academic journals It begins with the discovery of the first principles of all human motivation Motivation is fundamentally about change These principles can be phrased as two questions Where in your life do you wish to make a change To answer this question we can choose from four life domains the Self the Social the Material and the Spiritual Note that these represent pairs of opposites Self vs Social Material vs Spiritual What kind of change do you wish to make To answer this question we can choose from Aristotle s three levels of existence foundational being experiential doing and aspirational having The answers to these two questions form a Periodic Table of the Elements for human motivations in the form of a three by four matrix Because there are no other possible life domains or levels of aspiration the reader can have confidence that every possible human motivation is accounted for A key takeaway is that all twelve emotional needs are operating and directing us all the time and that a key to a happy actualized life is to pursue fulfillment of

needs in a balanced way which avoids serious problems associated with unbalanced need fulfillment. A recurring theme in *The Emotionally Agile Brain* is the value of distinguishing between authentic need fulfillment and the superficial inauthentic substitutes offered by our consumer culture. After analyzing motivational data from hundreds of thousands of individuals and consulting to scores of Fortune 500 clients, author J. D. Pincus explains it this way: "Everyone has a unique fingerprint of emotional needs at any given moment in time. Becoming aware of that motivational state is a profound revelation for most people. It cuts right through the noise and distractions of life and frees them to pursue what they really want."

Organic Chemistry T. W. Graham Solomons, Craig B. Fryhle, Scott A. Snyder, 2022-01-19 *Organic Chemistry* 13th Edition continues Solomons, Fryhle, and Snyder's tradition of excellence in teaching and preparing students for success in both the classroom and beyond. Central to the authors is their approach in emphasizing organic chemistry's relationship between structure and reactivity. To accomplish this, the content is organized in a way that combines the most useful features of a functional group approach with one largely based on reaction mechanisms. The authors' philosophy is to emphasize mechanisms and their common aspects as often as possible and at the same time use the unifying features of functional groups as the basis for most chapters. The structural aspects of the authors' approach show students what organic chemistry is. Mechanistic aspects of their approach show students how it works. And wherever an opportunity arises, the authors show students what it does in living systems and the physical world around us.
