Il teatro romano di Augusta

Bagiennorum. Dallo studio dei resti all'ipotesi ricostruttiva del progetto architettonico Eduardo Rulli,Massimo Limoncelli,2016-02-09 Gli scavi e i restauri del teatro di Augusta Bagiennorum ripresi a partire dagli anni cinquanta del Novecento dalla Soprintendenza alle Antichit del Piemonte mirarono a consolidare le sostruzioni della cavea e a riqualificare l edificio scenico con un moderno palcoscenico ligneo e l installazione di finti portali in cemento a imitazione di quelli in marmo lunense oggi conservati nel locale museo archeologico insieme ai frammenti della decorazione architettonica scolpita

nelle pietre tra le più belle e pregiate dell'Antichità. In anni recenti le nuove indagini della Soprintendenza e la collaborazione iniziata con l'allora funzionario responsabile dell'area archeologica Maria Cristina Preacco hanno fornito interessanti risultati sulla provenienza dei materiali che unitamente ai recenti studi multidisciplinari sulle scaenae frontes dei teatri romani hanno incoraggiato l'elaborazione di una ipotesi ricostruttiva della scena prima e dell'intero edificio poi. Questo volume vuole dare continuità a un progetto di Maria Cristina dedicato alla restituzione dei singoli monumenti che verosimilmente qualificarono Augusta Bagiennorum.

Auravana Habitat System Auravana, 2022-07-12 This publication is the Habitat System for a community type society. A habitat is a city town is a material operational service environment where humans live and have their needs fulfilled. It is a service composed of interacting material objects. This habitat system standard identifies the services, technologies, components and processes that compose a habitat service system. A habitat service system encodes and expresses humanity's decided material fulfillment services. When a decision resolves into a service, that service is specified to exist in the habitat system. Different configurations of a habitat lead to different levels and qualities of fulfillment. The coherent integration and open visualization of the habitat system is important for human requirements to be met at the local and global level through scientific planning. This standard represents the encoding of decisions into a global habitat service system with many local configurations of habitat that act together as a fulfillment platform for the whole community population. The visualization and simulation of humanity's interconnected habitat systems is essential for maintaining a set of complex fulfillment oriented constructions and operations that meet human fulfillment requirements. This publication details what has been, what is, and what could be constructed in the material environment. It depicts through language and symbols visualization and simulation a habitat service environment consisting of life technology and exploratory support services. For anything that is to be constructed in the material system, there is a written part, a drawing part, and a simulation part, which is also how the material system is subdivided. Further, all habitats are designed and operated by means of master planning; they all have a master plan.
